[1] Indexes with a commodity point code of .99 are calculated by a revised methodology. See "Technical Note on Data from the Producer Price Index Revision" at the back of this publication.

[2] Data for December 1979 have been revised to reflect the availability of late reports and corrections by respondents. Data are not seasonally adjusted.

[3] Seasonal commodity—no price available this month.

[4] Some of the titles of the individual commodity price indexes included in this grouping are not shown.

[5] Not available.

[6] Prices for some items in this grouping are lagged 1 month.

[7] Regional price indexes for bituminous coal, industrial sizes, contract are presented in table 8 of this report.

[8] Prices for natural gas (05-31) are lagged 1 month.

[9] Includes only domestic production. Some prices are lagged 1 month.

[10] Prices for gasoline (05-71), light distillate (05-72), middle distillate (05-73), and residual fuels (05-74) are lagged 1 month.

[11] Regional refined petroleum product prices and price indexes are presented in table 7 of this report.

[12] Some prices for industrial chemicals (06-1) are lagged 1 month.

N.E.C. Not elsewhere classified.

[1] These indexes are calculated by combining the indexes listed below by commodity code after each special commodity grouping (titles in table 6). The weights are those used for the comprehensive All Commodities index.

[2] Data for December1979 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication.

All commodities, less farm products: 02 through 15

All foods: 01-1, 01-7, and 02 less 02-61, 02-62, and 02-9

Processed foods: 02 less 02-61, 02-62, and 02-9

Industrial commodities, less fuels and power: 03, 04, and 06 through 15

Selected textile mill products: 03-27, 03-37-01-05, 03-37-01-07, 03-37-01-09, 03-37-01-11, 03-37-03-42, 03-4, 03-81-01-55, 03-81-01-72, 03-81-01-73, 03-81-02-39, 03-81-02-72, 03-81-02-74, 03-81-03-62, 03-81-03-64, 03-82-01, 03-82-02, 03-83-03-22, 03-83-03-42, and 12-31

Hosiery: 03-81-01-72, 03-81-01-73, 03-81-02-74, 03-81-03-64

Underwear and nightwear: 03-81-01-74, 03-81-01-75, 03-81-01-76, 03-81-01-77, 03-81-01-78, 03-81-02-74, 03-81-02-75, 03-81-02-78, and 03-81-03-62

Chemicals and allied products, including synthetic rubber and synthetic fibers: 03-1, 06 less 06-4, and 07-11-02

Pharmaceutical preparations: 06-35 and 06-36

Lumber and wood products, excluding millwork and other wood products: 08-1 and 08-3

Special metals and metal products: 10, 11-1, and 14-1

Fabricated metal products: 10-3, 10-4, 10-5, 10-6, 10-7, and 10-8

Copper and copper products: 10-22-01-06, 10-22-01-08, 10-22-01-13, 10-23-01, 10-24-01-06, 10-25-02, and 10-26-01

Machinery and motive products: 11 and 14

Machinery and equipment, except electrical: 11-1, 11-2, 11-3, 11-4, 11-6, 11-9

Agricultural machinery, including tractors: 11-11, 11-12 less 11-11-51 and 11-12-51

Metalworking machinery: 11-32, 11-33-04, 11-37, and 11-38

Numerically controlled machine tools: 11-37-11-11, 11-37-11-12, 11-37-14-11, and 11-37-16

Total tractors: 11-11 and 11-28 less 11-11-51

Industrial valves: 11-49-01-01 through 11-49-01-06, 11-49-01-16 through 11-49-01-19, 11-49-01-21 through 11-49-01-27

Industrial fittings: 11-49-01-11 through 11-49-01-15

Abrasive grinding wheels: 11-36-11, 11-36-12, 11-38-13, 11-38-14, 11-38-15

Agricultural machinery and equipment, less parts (old commodity code 11-1): 11-1 less 11-11-51 and 11-12-51

Farm and garden tractors, less parts (old commodity code 11-11): 11-11 less 11-11-51

Agricultural machinery excluding tractors, less parts (old commodity code 11-12): 11-12 less 11-12-51

Construction materials: 06-21, 07-21, 08-11, 08-12-01-01, 08-12-01-02, 08-12-01-31, 08-12-01-71, 08-2, 08-3, 09-2, 10-13-02-39, 10-13-02-48, 10-13-02-55, 10-13-02-63, 10-13-02-69, 10-13-02-71, 10-13-02-89, 10-13-02-91, 10-15-01-31, 10-15-01-32, 10-15-01-33, 10-25-01-01, 10-25-01-03, 10-25-01-04, 10-25-01-05, 10-25-01-17, 10-25-01-18, 10-25-01-19, 10-25-01-21, 10-25-01-23, 10-25-02-51, 10-25-02-52, 10-25-19-93, 10-26-01-06, 10-26-01-07, 10-26-01-09, 10-26-01-11, 10-26-02-67, 10-26-02-71, 10-41-01, 10-5, 10-6, 10-71, 10-73-01-01, 10-73-01-06, 10-73-01-11, 10-73-01-12, 10-73-01-13, 10-73-01-14, 10-73-01-15, 10-73-01-55, 10-73-01-57, 10-74-01-01, 10-74-01-31, 10-74-01-81, 10-74-01-82, 10-74-01-87, 10-74-01-91, 10-74-01-95, 10-81-01-46, 10-83-01-01, 10-83-01-03, 10-83-01-05, 10-83-01-07, 10-83-01-09, 10-81-01-11, 10-83-01-21, 10-83-01-23, 10-83-01-31, 10-83-01-33, 10-83-01-35, 10-83-01-37, 10-83-01-41, 10-83-01-46, 10-83-01-48, 10-89-01-26, 10-89-01-33, 10-89-01-51, 11-42, 11-47, 11-49-01-02, 11-49-01-08, 11-49-01-12, 11-49-01-15, 11-71-01-01, 11-71-01-02, 11-71-01-03, 11-71-01-04, 11-71-02-65, 11-71-02-71, 11-71-02-73, 12-11-01-06, 12-32, 13-11-01-01, 13-11-02-07, 13-2, 13-3 13-4, 13-6, 13-7, 13-91, 13-92, 13-93

Table 10. Producer price indexes: Changes in commodity specifications, April 1980

Commodity code	New specification	Old specification
03-37-01-01	Cotton print cloth: 48-51", 3.09-3.51 yds/lb. 68-80x 68-80, gray; manufacturer to manufacturer, converter to user, 100 yds. or more, f.o.b. mill or freight allowed, yard. NOTE: The index is designed to measure changes in the prices of shipping goods by rail in the United States. The representative prices and sample used for the index reflect the railroads' prices for shipping a fixed set of commodities under specified and unchanging conditions. The index is not intended to measure changes in railroad revenue or shipper costs that result from changes in services or mode.

Technical Notes

Brief Explanation of Producer Price Indexes

Producer Price Indexes measure average changes in prices received in primary markets of the United States by producers of commodities in all stages of processing. These data were previously presented as the Wholesale Price Index. The name "Producer Price Indexes" is now being used to reflect more accurately the coverage of the data. The sample used for calculating these indexes continues to contain nearly 2,800 commodities and about 10,000 quotations selected to represent the movement of prices of all commodities produced in the manufacturing, agriculture, forestry, fishing, mining, gas and electricity, and public utilities sectors. The universe includes all commodities produced or imported for sale in commercial transactions in primary markets in the United States.

Producer Price Indexes can be organized by stage of processing or by commodity. The stage-of-processing structure organizes products by degree of fabrication (i.e., finished goods, intermediate or semifinished goods, and crude materials). The commodity structure organizes products by similarity of end-use or material composition.

Finished goods are commodities that will not undergo further processing and are ready for sale to the ultimate user, either an individual consumer or a business firm. Capital equipment (formerly called producer finished goods) includes commodities such as motor trucks, farm equipment, and machine tools. Finished consumer goods include foods and other types of goods eventually purchased by retailers and used by consumers. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durables such as automobiles, household furniture, and jewelry, and nondurables such as apparel and gasoline.

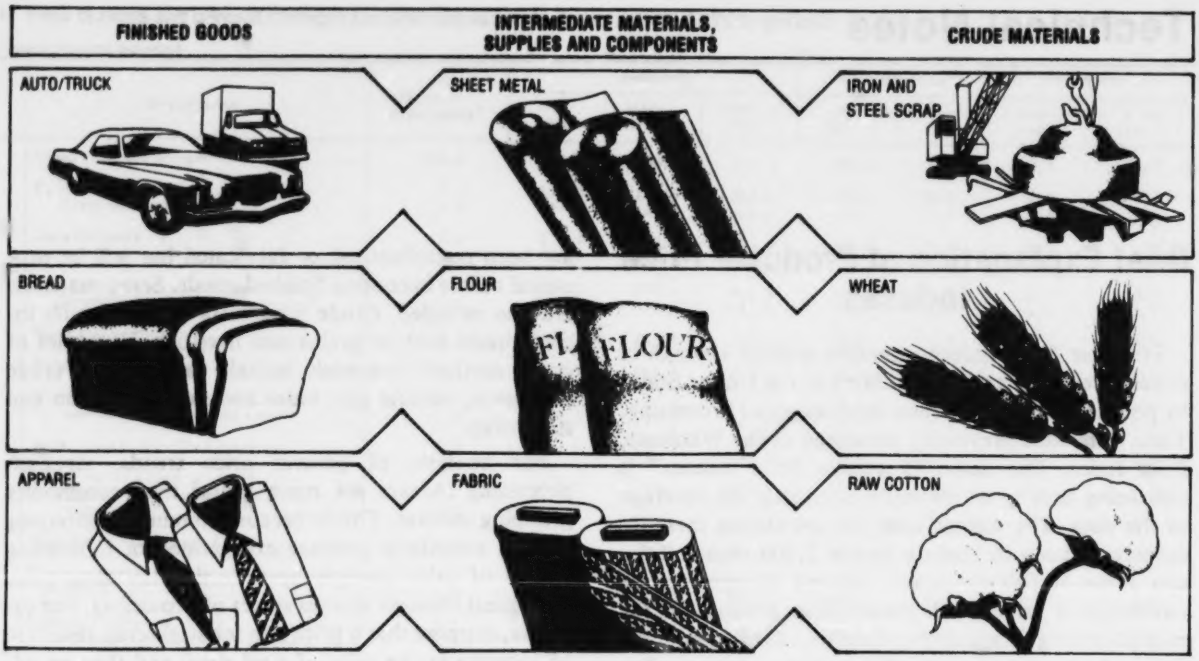
Intermediate materials, supplies, and components are commodities that have been processed but require further processing before they become finished goods. Examples of such semifinished goods include flour, cotton yarns, steel mill products, belts and belting, lumber, liquefied petroleum gas, paper boxes, and motor vehicle parts.

Crude materials for further processing include products entering the market for the first time which have not been manufactured or fabricated but will be processed before becoming finished goods. Scrap materials are also included. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, natural gas, hides and skins, and iron and steel scrap.

For analysis of general price trends, stage-of-processing indexes are more useful than commodity grouping indexes. This is because commodity grouping indexes sometimes produce exaggerated or misleading signals of price changes by reflecting the same price movement through various stages of processing. For example, suppose that a price rise for steel scrap results in an increase in the price of steel sheet and then an advance in prices of automobiles produced from that steel. The All Commodities Price Index and the Industrial Commodities Price Index would reflect the same price movement three times—once for the steel scrap, once for the steel sheet, and once for the automobiles. This multiple counting occurs because the weighting structure for the All Commodities Index uses the total shipment values for all commodities at all stages of processing. On the other hand, the Finished Goods Price Index would reflect the change in automobile prices, the Intermediate Materials Price Index would reflect the steel sheet price change, and the Crude Materials Price Index would reflect the rise in the price of steel scrap. (See illustration.)

To the extent possible, prices used in calculating Producer Price Indexes apply to the first significant commercial transaction in the United States, from the production or central marketing point. Price data are generally collected monthly, primarily by mail questionnaire. Respondents are asked to provide net prices or to provide all applicable discounts. BLS attempts to base Producer Price Indexes on actual transaction prices; however, list or book prices are used if transaction prices are not available. Most prices are obtained directly from producing companies on a voluntary and confidential basis, but some prices are taken from trade publications or from other Government agencies. Prices generally are reported for the Tuesday of the week containing the 13th day of the month.

In calculating Producer Price Indexes, price changes for the various commodities are averaged together with weights representing their importance in the total net selling value of all commodities as of 1972. The detailed



data are aggregated to obtain indexes for stage-of-processing groupings, commodity groupings, durability of product groupings, and a number of special composite groupings. Each index measures price changes from a reference period which equals 100.0 (usually 1967, as designated by the Office of Management and Budget). An increase of 125 percent from the reference period in the Finished Goods Price Index, for example, is shown as 225.0. This change can also be expressed in dollars, as follows: "The price of a representative sample of finished goods sold in primary markets in the United States has risen from $100 in 1967 to $225."

Calculating Index Changes

Movements of price indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period, while percent changes are not. The box shows the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates that are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted data usually are preferred because they eliminate the effect of changes that normally occur at about the same time and in about the same magnitude every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For this reason, seasonally adjusted data more clearly reveal the underlying cyclical

trends. Seasonally adjusted data are subject to revision when seasonal factors are revised each year.

The unadjusted data are of primary interest to users who need information which can be related to the actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. Unadjusted data generally are used in escalating contracts such as purchase agreements or real estate leases.

Data from the Producer Price Index Revision

Each month this report presents data from the Producer Price Index (PPI) revision in table 4, "Producer price indexes for the net output of selected industries and their products." Indexes for the four industries in the pilot program to test the methodology and concepts of the PPI revision formerly appeared in table 14. Table 4 includes data for additional Standard Industrial Classification (SIC) industries (4-digit level) and Census products (7-digit level); indexes for Census product classes (5- and 6-digit levels) and more detailed subproducts (9-digit level); and, for some industries, indexes for other sources of revenue. Thus, table 4 shows all official indexes arising from the ongoing PPI revision. By 1985, table 4 will cover all 493 SIC mining and manufacturing industries.

Traditional commodity price indexes and Industry-Sector Price Indexes (ISPI's) will continue to be published. In 1983, however, an entirely new structure will replace the traditional commodity structure as the primary vehicle for releasing and analyzing price changes at the primary market level.

Kinds of product indexes

Industries listed in table 4 may be represented by one to three kinds of product indexes. Every industry has *primary product indexes* to show changes in prices received by establishments classified in the industry for products made primarily, but not exclusively, within that industry. To be classified in an industry, an establishment must have a plurality of its total shipment value accounted for by primary products. In addition, some industries also may have *secondary product indexes* to show changes in prices received by establishments classified in the industry for products primary to some other industry. Finally, some industries have *miscellaneous receipts indexes* to show price changes in other sources of revenue received by establishments within the industry which are not derived from the sale of their products. Because of the distinction between primary and secondary products, an index for a product made in one industry may differ from the index for the same product made in another industry.

Corresponding indexes

Some 7-digit Census products published in table 4 correspond to 8-digit commodities published in table 6. Similarly, some 4-digit SIC industries and 5-digit Census product classes in table 4 correspond to the ISPI's in tables 11, 12, and 13. In these cases, movements in the commodity or Industry-Sector Price Indexes are calculated on the basis of the movements of their counterparts in table 4. Although most such indexes continue to be published in tables, 6, 11, or 13 on their original base period of 1967=100 or some later base, the corresponding indexes in table 4 are published on a base of the month of their introduction. Therefore, index levels for corresponding items may differ, but monthly percent changes will be identical.

A point code of ".99" immediately after an 8-digit commodity code in table 6 identifies a commodity index that is calculated from a product index in table 4. A footnote after the industry or product class title in tables 11, 12, or 13 indicates an ISPI based on an index from table 4. The aggregation of commodity price indexes into commodity grouping indexes in table 6 continues to follow the traditional methodology; similarly, stage-of-processing price indexes in table 1 also are calculated from the commodity grouping indexes as in the past.

How new indexes differ from traditional commodity indexes

New indexes differ from traditional commodity indexes in a number of respects:

(1) New indexes are *industry-based.* The entire output of each industry is sampled, including primary and secondary production and miscellaneous receipts. Traditional commodity indexes are based on a selection of the most important commodities, and most Industry-Sector Price Indexes continue to be calculated from these traditional commodity indexes. In addition, traditional ISPI's do not cover miscellaneous receipts, and prices of products are included without systematic regard for the industry classification of the producer. New indexes, on the other hand, are based on prices of primary and secondary products made by producers classified in the specified industry; as a result, new indexes apply to production within the specified industry. As data from more mining and manufacturing industries become available, additional indexes will be constructed to cover each product regardless of the industry of origin.

(2) New indexes are easier to use with other industry-oriented economic data because they are *classified according to the SIC* and incorporate most features of the Census of Manufactures product code extensions of the SIC.

(3) New indexes use *net output values of shipments as weights.* Net output values refer to the value of shipments leaving the industry and exclude intra-industry shipments. In contrast, weights in traditional commodity price indexes and ISPI's include shipments within an industry. The resulting multiple-counting of price changes at successive stages of processing is one major defect of the traditional commodity grouping indexes. Stage-of-processing indexes partially correct this defect, but new indexes consistently correct it at all levels of aggregation. (Net output weights are not used, however, for traditional commodity indexes whose movements are based on corresponding new indexes.)

In the revision program, the relative importance of items within a product is based upon shipment value data and sampling weights from the revision survey itself. When detailed products are aggregated to the 5-digit product class and 4-digit industry levels, however, weights are taken from Census of Manufactures data, along with estimates of intra-industry shipments from input-output tables produced by the Bureau of Economic Analysis of the U.S. Department of Commerce.

(4) New indexes emphasize *actual transaction prices at the time of shipment* to minimize the use of list prices and order prices, which occasionally have been used in traditional commodity price indexes and ISPI's. In addition, some traditional indexes have been calculated intentionally from order prices rather than from shipment prices.

(5) New indexes are based on prices reported by companies of all sizes and locations selected by *probability sampling.* In addition, individual items and transaction terms from these firms are chosen by probability techniques. (Estimates of sampling error will be published later.) In the traditional PPI program, major companies selected on a judgment basis have been asked to report prices for volume-selling items under "typical" transaction terms.

Early: "Improving the Measurement of Producer Price Change," April 1978; and "The Producer Price Index Revision: Overview and Pilot Survey Results," December 1979. Producer Prices and Price Indexes is a monthly report on producer price movements including text, tables, and technical notes. An annual supplement contains monthly data for the calendar year, annual averages, and information on weights and changes in the sample. A subscription may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Subscription price:
  $17 a year domestic (includes supplement)
  $4.25 additional foreign

Single copy $2.25
Supplement $2.75

The Secretary of Labor has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Department. Use of funds for printing this periodical has been approved by the Director of the Office of Management and Budget through July 1983. Controlled circulation postage paid at Washington, D.C. Price Movements
May 1980

The Producer Price Index for Finished Goods moved up 0.3 percent from April to May on a seasonally adjusted basis. This was somewhat less than the 0.5 percent rise in April and was the smallest increase since a 0.2 percent rise in September 1977. Prices for intermediate (semifinished) goods were 0.4 percent higher, the third consecutive monthly advance of half a percent or less. Crude material prices climbed 1.3 percent after declining substantially in both March and April (table A).

Among finished goods, the capital equipment index showed no change, following a large April advance. Energy prices rose 0.8 percent, far less than in any recent month. Food prices edged up 0.1 percent after falling sharply in April. Prices for finished consumer goods other than foods and energy increased 0.4 percent, somewhat less than in the previous month (table B).

Before seasonal adjustment, the Producer Price Index for Finished Goods rose 0.4 percent to 241.0 (1967=100). Over the year, the Finished Goods Price Index advanced 13.3 percent. From May 1979 to May 1980, finished energy prices climbed 74.3 percent, consumer food prices rose 1.5 percent, the index for finished consumer goods other than foods and energy increased 11.0 percent, and capital equipment prices advanced 9.7 percent. The Producer Price Index for intermediate goods was 15.8 percent higher than a year ago, and crude material prices were up 6.5 percent.

Finished goods

Finished consumer goods. The Producer Price Index for finished consumer goods moved up 0.4 percent in May on a seasonally adjusted basis after showing no change in April. The index for finished foods moved up 0.1 percent, following a 2.8 percent decrease in April. Prices for beef and veal and pork continued to decline, although considerably less than in the preceding month, and processed poul-

try prices turned up after dropping in April. Prices for refined sugar in consumer size packages climbed 33.4 percent, following a decline in the previous month, and fresh and dried vegetable prices rose about 20 percent after edging up slightly in April. Increases were also registered in May for fresh fruits, dairy products, eggs, flour base mixes and doughs, and packaged cocoa. In contrast, roasted coffee prices fell for the sixth consecutive month. Declines were also recorded for whole black pepper, fish, milled rice, and vegetable oil end products.

Prices for energy goods rose 0.8 percent in May, much less than in any month since September 1978. Gasoline prices were up only 0.4 percent, compared with an increase of 4.3 percent in April, and prices for home heating oil advanced 1.1 percent, following a rise of 3.0 percent in the previous month.

The index for finished consumer goods less foods and energy rose 0.4 percent after a 0.6 percent increase in April. Prices for passenger cars, silver jewelry, and costume jewelry turned down after increasing a month earlier. Prices for cosmetics, household furniture, mobile homes, and disposable plastic dinnerware and tableware advanced less than in the previous month. On the other hand, prices increased more than in April for nonalcoholic beverages, tobacco products, sanitary papers and health products, and household appliances. Prices for gold jewelry and tires and tubes turned up after declining for 2 consecutive months. Prices for household flatware fell but much less than in April. Apparel prices rose about as much as in each of the 2 preceding months.

Capital equipment. The index for capital equipment was unchanged from April to May, after rising 1.9 percent in April. Prices for motor vehicles and metal forming machine tools turned down after increasing in the previous month. Substantially smaller increases were registered for many other capital goods, particularly plastic and rubber industry machinery, food products machinery, generators, oilfield machinery, construction machinery, and photographic equipment.

Intermediate materials

The Producer Price Index for intermediate materials, supplies, and components rose 0.4 percent from April to May on a seasonally adjusted basis, the third consecutive moderate increase following advances of 1 percent or more during nearly all of 1979 and early 1980. The rate of advance for most kinds of intermediate goods continued to slow down. However, prices for foods and feeds were sharply higher.

The intermediate energy index edged up 0.1 percent, following a 0.9 percent rise in April and much larger advances in each of the previous 13 months. Residual fuel prices fell substantially for the second consecutive month, and the rate of increase slowed for commercial jet fuel, diesel fuel, and lubricating oil materials. On the other hand, electric power rates increased more than in April, and liquefied petroleum gas prices turned up after edging down the month before.

The index for intermediate materials less foods and energy also rose 0.1 percent, slightly less than in either of the 2 previous months. The durable manufacturing materials category declined for the third consecutive month, as lower prices were registered for copper, silver, lead, zinc, tin, hardwood lumber, and plastic parts. In contrast, primary aluminum prices continued to rise sharply.

The construction materials index edged down 0.1 percent, following a similar decrease in April. Prices fell for nonferrous wire and cable, millwork, softwood lumber, gypsum products, clay tile, and asphalt roofing. However, large increases were recorded for plywood, concrete products, prepared paint, building paper and board, wiring devices, and plumbing fixtures.

The index for manufacturing components rose 0.3 percent, much less than in any recent month. Prices rose much less than in April for a broad range of items, particularly electronic components, locks, internal combustion engines, and ball and roller bearings. Switchgear and switchboard prices declined after several months of large increases.

The nondurable manufacturing materials index advanced 1.0 percent, following a 1.5 percent boost in April. Price increases slowed for several items, including woodpulp, plastic resins, synthetic rubber, and processed yarns and threads. Prices turned down for gray fabrics and phosphates, and the indexes for leather and inedible fats and oils both declined for the fourth consecutive month. On the other hand, price increases accelerated for industrial chemicals, synthetic fibers, paper, and paperboard.

Among other intermediate nonfood nonenergy goods, prices fell for photographic supplies, metal forming machine tool parts, and wooden pallets. Prices rose less than in the previous month for mining machinery parts, metal cutting machine tool parts, abrasive products, paper boxes and containers, and mixed fertilizers.

The intermediate foods and feeds index climbed 6.1 percent, following sizable decreases in March and April. The upturn in May was due in large part to a 25 percent advance in prices for refined sugar used in food manufacturing. Feed prices turned up after a sharp drop in April. Prices also rose after declining in the previous month for flour, crude vegetable oils, and animal fats and oils. Corn syrup prices continued to move up, but not as much as in April.

Crude materials

The Producer Price Index for crude materials for further processing increased 1.3 percent in May on a seasonally adjusted basis, following a 3.5 percent decrease in April. Foodstuff prices turned up after falling for 2 months, crude energy material prices continued to rise, but prices for other materials fell for the third consecutive month.

The index for crude foodstuffs and feedstuffs increased 2.4 percent in May, in contrast to a decrease of 6.1 percent in the previous month. Prices for raw cane sugar jumped 42.5 percent after climbing 16 percent in April. Prices for grains, green coffee, and soybeans turned up after falling in the previous month. Prices for livestock, live poultry, and cocoa beans moved down but not as much as in April.

Prices for crude energy materials rose 1.6 percent, slightly less than the 2.1 percent advance in April. Natural gas prices increased about as much as in the previous month, but crude petroleum prices rose less.

The index for crude nonfood materials less energy declined 2.7 percent. This index had decreased about 5 percent in each of the 2 preceding months. Prices for iron and steel scrap, aluminum base scrap, and hides and skins all fell more than 10 percent. Wastepaper prices declined substantially after rising sharply in April. Crude natural rubber prices dropped for the third consecutive month. Cotton prices increased but not as much as in the preceding month.

[1] Comprehensive relative importance figures are computed once each year in December.

[2] Data for January 1980 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication.

[3] Not seasonally adjusted.

[4] Includes crude petroleum.

[5] Excludes crude petroleum.

[6] Percent of total finished goods.

[7] Percent of total intermediate materials.

[8] Formerly titled "Crude materials for further processing, excluding crude foodstuffs and feedstuffs, plant and animal fibers, oilseeds, and leaf tobacco."

[9] Percent of total crude materials.

NOTE: Relative importance figures have been revised to reflect revisions in December 1979 indexes.

[1] Comprehensive relative importance figures are computed once each year in December. Data shown are expressed as a percent of total finished goods, total intermediate materials, or total crude materials. Data shown will not add up to 100.000 because not all commodity components of each stage-of-processing (SOP) index are shown; relative importance figures shown account for about 87 percent of total finished goods, about 89 percent of total intermediate materials, and about 96 percent of total crude materials. For each commodity component of the Finished Goods Index which is allocated to both capital equipment and finished consumer goods excluding foods, the relative importance figure shown reflects only the share allocated to the SOP grouping under which it is listed. For example, the relative importance figure shown for household furniture under the SOP grouping for finished consumer goods excluding foods includes the share allocated to that SOP grouping but not the share allocated to capital equipment.

[2] All data are subject to revision 4 months after original publication.

[3] Not seasonally adjusted.

[4] Not available.

NOTE: Relative importance figures have been revised to reflect revisions in December 1979 indexes.

[1] Industry and product class indexes may include products not shown separately.

[2] Data for January 1980 have been revised to reflect the availability of late reports and corrections by respondents. In addition, indexes based on December 1979 = 100 have been corrected for January, February, and March 1980 because of revisions in December 1979 prices; these indexes are still subject to revision on the normal schedule. All data are subject to revision 4 months after original publication. Data are not seasonally adjusted.

[3] Not available.

[4] Seasonal product—no price available this month.

[5] Detailed product indexes for industries 2075, 2711, 3272, and 3633 are no longer based on December 1977 = 100. The new base, December 1979 = 100, is consistent with the base of the higher level indexes.

NOTE: Indexes in this table are calculated by a revised methodology. See "Technical Note on Data from the Producer Price Index Revision" at the back of this publication.

[1] Indexes with a commodity point code of .99 are calculated by a revised methodology. See "Technical Note on Data from the Producer Price Index Revision" at the back of this publication.

[2] Data for January 1980 have been revised to reflect the availability of late reports and corrections by respondents. Data are not seasonally adjusted.

[3] Seasonal commodity—no price available this month.

[4] Some of the titles of the individual commodity price indexes included in this grouping are not shown.

[5] Not available.

[6] Prices for some items in this grouping are lagged 1 month.

[7] Regional price indexes for bituminous coal, industrial sizes, contract are presented in table 8 of this report.

[8] Prices for natural gas (05-31) are lagged 1 month.

[9] Includes only domestic production. Some prices are lagged 1 month.

[10] Prices for gasoline (05-71), light distillate (05-72), middle distillate (05-73), and residual fuels (05-74) are lagged 1 month.

[11] Regional refined petroleum product prices and price indexes are presented in table 7 of this report.

[12] Some prices for industrial chemicals (06-1) are lagged 1 month.

N.E.C. Not elsewhere classified.

[1] Data for January 1980 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication. All prices are lagged 1 month. Data are not seasonally adjusted.

[2] Caution should be used in interpreting month-to-month changes because of low response rates, which ranged from 30 to 60 percent for these indexes.

NOTE: The index is designed to measure changes in the prices of shipping goods by rail in the United States. The representative prices and sample used for the index reflect the railroads' prices for shipping a fixed set of commodities under specified and unchanging conditions. The index is not intended to measure changes in railroad revenue or shipper costs that result from changes in services or mode.

Technical Notes

Brief Explanation of Producer Price Indexes

Producer Price Indexes measure average changes in prices received in primary markets of the United States by producers of commodities in all stages of processing. These data were previously presented as the Wholesale Price Index. The name "Producer Price Indexes" is now being used to reflect more accurately the coverage of the data. The sample used for calculating these indexes continues to contain nearly 2,800 commodities and about 10,000 quotations selected to represent the movement of prices of all commodities produced in the manufacturing, agriculture, forestry, fishing, mining, gas and electricity, and public utilities sectors. The universe includes all commodities produced or imported for sale in commercial transactions in primary markets in the United States.

Producer Price Indexes can be organized by stage of processing or by commodity. The stage-of-processing structure organizes products by degree of fabrication (i.e., finished goods, intermediate or semifinished goods, and crude materials). The commodity structure organizes products by similarity of end-use or material composition.

Finished goods are commodities that will not undergo further processing and are ready for sale to the ultimate user, either an individual consumer or a business firm. Capital equipment (formerly called producer finished goods) includes commodities such as motor trucks, farm equipment, and machine tools. Finished consumer goods include foods and other types of goods eventually purchased by retailers and used by consumers. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durables such as automobiles, household furniture, and jewelry, and nondurables such as apparel and gasoline.

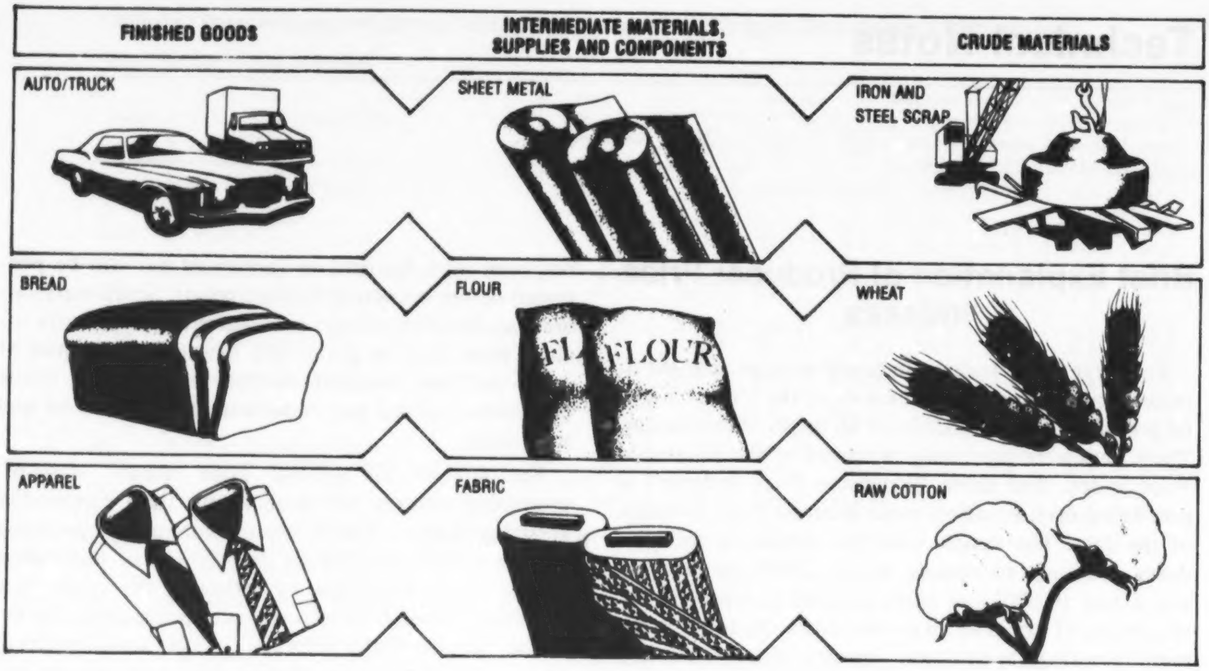
Intermediate materials, supplies, and components are commodities that have been processed but require further processing before they become finished goods. Examples of such semifinished goods include flour, cotton yarns, steel mill products, belts and belting, lumber, liquefied petroleum gas, paper boxes, and motor vehicle parts.

Crude materials for further processing include products entering the market for the first time which have not been manufactured or fabricated but will be processed before becoming finished goods. Scrap materials are also included. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, natural gas, hides and skins, and iron and steel scrap.

For analysis of general price trends, stage-of-processing indexes are more useful than commodity grouping indexes. This is because commodity grouping indexes sometimes produce exaggerated or misleading signals of price changes by reflecting the same price movement through various stages of processing. For example, suppose that a price rise for steel scrap results in an increase in the price of steel sheet and then an advance in prices of automobiles produced from that steel. The All Commodities Price Index and the Industrial Commodities Price Index would reflect the same price movement three times—once for the steel scrap, once for the steel sheet, and once for the automobiles. This multiple counting occurs because the weighting structure for the All Commodities Index uses the total shipment values for all commodities at all stages of processing. On the other hand, the Finished Goods Price Index would reflect the change in automobile prices, the Intermediate Materials Price Index would reflect the steel sheet price change, and the Crude Materials Price Index would reflect the rise in the price of steel scrap. (See illustration.)

To the extent possible, prices used in calculating Producer Price Indexes apply to the first significant commercial transaction in the United States, from the production or central marketing point. Price data are generally collected monthly, primarily by mail questionnaire. Respondents are asked to provide net prices or to provide all applicable discounts. BLS attempts to base Producer Price Indexes on actual transaction prices; however, list or book prices are used if transaction prices are not available. Most prices are obtained directly from producing companies on a voluntary and confidential basis, but some prices are taken from trade publications or from other Government agencies. Prices generally are reported for the Tuesday of the week containing the 13th day of the month.

In calculating Producer Price Indexes, price changes for the various commodities are averaged together with weights representing their importance in the total net selling value of all commodities as of 1972. The detailed



data are aggregated to obtain indexes for stage-of-processing groupings, commodity groupings, durability of product groupings, and a number of special composite groupings. Each index measures price changes from a reference period which equals 100.0 (usually 1967, as designated by the Office of Management and Budget). An increase of 125 percent from the reference period in the Finished Goods Price Index, for example, is shown as 225.0. This change can also be expressed in dollars, as follows: "The price of a representative sample of finished goods sold in primary markets in the United States has risen from $100 in 1967 to $225."

Calculating Index Changes

Movements of price indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period, while percent changes are not. The box shows the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates that are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change	
Finished Goods Price Index	185.5
less previous index	184.5
equals index point change	1.0
Index Percent Change	
Index point change	1.0
divided by the previous index	184.5
equals	0.005
result multiplied by 100	0.005 x 100
equals index percent change	0.5

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted data usually are preferred because they eliminate the effect of changes that normally occur at about the same time and in about the same magnitude every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For this reason, seasonally adjusted data more clearly reveal the underlying cyclical

trends. Seasonally adjusted data are subject to revision when seasonal factors are revised each year.

The unadjusted data are of primary interest to users who need information which can be related to the actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. Unadjusted data generally are used in escalating contracts such as purchase agreements or real estate leases.

Data from the Producer Price Index Revision

Each month this report presents data from the Producer Price Index (PPI) revision in table 4, "Producer price indexes for the net output of selected industries and their products." Indexes for the four industries in the pilot program to test the methodology and concepts of the PPI revision formerly appeared in table 14. Table 4 includes data for additional Standard Industrial Classification (SIC) industries (4-digit level) and Census products (7-digit level); indexes for Census product classes (5- and 6-digit levels) and more detailed subproducts (9-digit level); and, for some industries, indexes for other sources of revenue. Thus, table 4 shows all official indexes arising from the ongoing PPI revision. By 1985, table 4 will cover all 493 SIC mining and manufacturing industries.

Traditional commodity price indexes and Industry-Sector Price Indexes (ISPI's) will continue to be published. In 1983, however, an entirely new structure will replace the traditional commodity structure as the primary vehicle for releasing and analyzing price changes at the primary market level.

Kinds of product indexes

Industries listed in table 4 may be represented by one to three kinds of product indexes. Every industry has *primary product indexes* to show changes in prices received by establishments classified in the industry for products made primarily, but not exclusively, within that industry. To be classified in an industry, an establishment must have a plurality of its total shipment value accounted for by primary products. In addition, some industries also may have *secondary product indexes* to show changes in prices received by establishments classified in the industry for products primary to some other industry. Finally, some industries have *miscellaneous receipts indexes* to show price changes in other sources of revenue received by establishments within the industry which are not derived from the sale of their products. Because of the distinction between primary and secondary products, an index for a product made in one industry may differ from the index for the same product made in another industry.

Corresponding indexes

Some 7-digit Census products published in table 4 correspond to 8-digit commodities published in table 6. Similarly, some 4-digit SIC industries and 5-digit Census product classes in table 4 correspond to the ISPI's in tables 11, 12, and 13. In these cases, movements in the commodity or Industry-Sector Price Indexes are calculated on the basis of the movements of their counterparts in table 4. Although most such indexes continue to be published in tables, 6, 11, or 13 on their original base period of 1967=100 or some later base, the corresponding indexes in table 4 are published on a base of the month of their introduction. Therefore, index levels for corresponding items may differ, but monthly percent changes will be identical.

A point code of ".99" immediately after an 8-digit commodity code in table 6 identifies a commodity index that is calculated from a product index in table 4. A footnote after the industry or product class title in tables 11, 12, or 13 indicates an ISPI based on an index from table 4. The aggregation of commodity price indexes into commodity grouping indexes in table 6 continues to follow the traditional methodology; similarly, stage-of-processing price indexes in table 1 also are calculated from the commodity grouping indexes as in the past.

How new indexes differ from traditional commodity indexes

New indexes differ from traditional commodity indexes in a number of respects:

(1) New indexes are *industry-based.* The entire output of each industry is sampled, including primary and secondary production and miscellaneous receipts. Traditional commodity indexes are based on a selection of the most important commodities, and most Industry-Sector Price Indexes continue to be calculated from these traditional commodity indexes. In addition, traditional ISPI's do not cover miscellaneous receipts, and prices of products are included without systematic regard for the industry classification of the producer. New indexes, on the other hand, are based on prices of primary and secondary products made by producers classified in the specified industry; as a result, new indexes apply to production within the specified industry. As data from more mining and manufacturing industries become available, additional indexes will be constructed to cover each product regardless of the industry of origin.

(2) New indexes are easier to use with other industry-oriented economic data because they are *classified according to the SIC* and incorporate most features of the Census of Manufactures product code extensions of the SIC.

(3) New indexes use *net output values of shipments as weights.* Net output values refer to the value of shipments leaving the industry and exclude intra-industry shipments. In contrast, weights in traditional commodity price indexes and ISPI's include shipments within an industry. The resulting multiple-counting of price changes at successive stages of processing is one major defect of the traditional commodity grouping indexes. Stage-of-processing indexes partially correct this defect, but new indexes consistently correct it at all levels of aggregation. (Net output weights are not used, however, for traditional commodity indexes whose movements are based on corresponding new indexes.)

In the revision program, the relative importance of items within a product is based upon shipment value data and sampling weights from the revision survey itself. When detailed products are aggregated to the 5-digit product class and 4-digit industry levels, however, weights are taken from Census of Manufactures data, along with estimates of intra-industry shipments from input-output tables produced by the Bureau of Economic Analysis of the U.S. Department of Commerce.

(4) New indexes emphasize *actual transaction prices at the time of shipment* to minimize the use of list prices and order prices, which occasionally have been used in traditional commodity price indexes and ISPI's. In addition, some traditional indexes have been calculated intentionally from order prices rather than from shipment prices.

(5) New indexes are based on prices reported by companies of all sizes and locations selected by *probability sampling.* In addition, individual items and transaction terms from these firms are chosen by probability techniques. (Estimates of sampling error will be published later.) In the traditional PPI program, major companies selected on a judgment basis have been asked to report prices for volume-selling items under "typical" transaction terms.

Price Movements
June 1980

The Producer Price Index for Finished Goods moved up 0.8 percent from May to June on a seasonally adjusted basis. This was more than in either of the 2 preceding months but was much less than in any month during the first quarter. Prices for intermediate (semifinished) goods were also 0.8 percent higher, more than in the past few months but less than in the opening months of the year. Crude material prices rose 0.3 percent, following a 1.3 percent climb in May and substantial declines in the 2 months before that (table A).

Among finished goods, the index for consumer goods other than foods and energy climbed 1.1 percent, considerably more than in any other month since Feburary. Capital equipment prices advanced 0.9 percent, after registering no change in May and rising sharply in April. Food prices were up 0.7 percent following a slight rise in May. In contrast to these accelerations in June, the finished energy goods index declined 0.6 percent, the first drop in this index in more than 2 years (table B).

Before seasonal adjustment, the Producer Price Index for Finished Goods rose 0.7 percent to 242.6 (1967 = 100). Over the year, the Finished Goods Price Index advanced 13.5 percent. From June 1979 to June 1980, finished energy prices rose 3.3 percent, the index for finished consumer goods other than foods and energy increased 11.6 percent, and capital equipment prices advanced 10.1 percent. The Producer Price Index for intermediate goods was 15.6 percent higher than a year ago, and crude material prices were up 5.8 percent.

Finished goods

Finished consumer goods. The Producer Price Index for finished consumer goods advanced 0.7 percent in June on a seasonally adjusted basis, after increasing 0.4 percent in May and showing no change in April. The June increase, however, was considerably less than the 1.6 percent average monthly advance in the first quarter. Prices for consumer durables turned up sharply after declining a month earlier. Food prices rose more than in May. Price increases for consumer nondurable goods

other than foods and energy rose about as much as in May. Energy prices, however, declined after slowing down substantially in May from the unusually sharp increases registered earlier in the year.

The index for finished consumer goods less foods and energy rose 1.1 percent, following a 0.4 percent advance in May. Gold jewelry prices rose almost 12 percent, much faster than in May. The index for passenger cars turned up 1.4 percent, about the same as its decline a month earlier. Prices also rose for apparel, household appliances, tires and tubes, and prescription drugs. On the other hand, prices declined for silver jewelry and floor coverings.

The index for finished foods increased 0.7 percent, after edging up 0.1 percent in May and declining 2.8 percent in April. Prices for beef and pork turned up after declining sharply in the 2 previous months. Roasted coffee prices increased following 6 months of decreases. On the other hand, prices turned down after increasing in May for processed poultry, fresh fruits, and eggs. Price increases were much smaller than in May for refined sugar in consumer size packages, fresh and dried vegetables, and packaged cocoa. Prices for dairy products continued to rise, while prices for milled rice and whole black pepper continued to decline.

Prices for energy goods fell 0.6 percent, the largest decline since the 1.6 percent drop in March 1976. Gasoline prices fell 1.2 percent, and prices for home heating oil were unchanged.

Capital equipment. The index for capital equipment increased 0.9 percent in June, following no change in May. Prices for motor vehicles turned up after declining a month earlier. The acceleration in price increases was also fueled by advances for construction machinery, photographic equipment, office and store machinery, oilfield and mining machinery, and machine tools.

Intermediate materials

The Producer Price Index for intermediate materials, supplies, and components advanced 0.8 percent in June, seasonally adjusted, following 3 months of smaller increases. The acceleration was led by sharp advances in durable manufacturing and construction materials. Energy goods rose somewhat more than in May, but the foods and feeds index was unchanged after a sharp jump the month before.

The index for intermediate materials less foods and energy moved up 0.9 percent after negligible increases in the 3 preceding months. The durable manufacturing materials index rose 1.2 percent, following 3 consecutive months of declines. The upturn was primarily due to advances of more than 15 percent for gold, silver, and jewelers' materials. Higher prices were also recorded for foundry and forge shop products, safety glass, and plastic parts. On the other hand, prices fell for hardwood lumber, copper, and lead.

The construction materials index increased 1.3 percent after edging down in April and May. Most of the June advance was caused by higher prices for softwood lumber, and plywood, and millwork. In contrast, bituminous paving material prices declined.

The nondurable manufacturing materials index moved up 0.6 percent, much less than in most recent months. Prices declined for inedible fats and oils, processed yarns and threads, gray fabrics, nitrogenates, and synthetic rubber. In addition, price increases slowed for industrial chemicals, paperboard, and synthetic fibers. Leather prices, however, turned up after falling for 4 months.

Price increases accelerated for a number of manufacturing components, including electronic components, rubber products, and bearings. Among other intermediate nonfood goods excluding energy, large increases were registered for unsupported plastic film, photographic supplies, and electric lamps and bulbs. Prices for wooden pallets, however, continued to fall.

The intermediate energy goods index rose 0.6 percent, the third consecutive increase of less than 1 percent following 13 months of much sharper advances. Prices rose less than in May for electric power, liquefied petroleum gas, and commercial jet fuel. Diesel fuel prices turned down for the first time in 2 years. On the other hand, residual fuel prices edged up following sharp declines in April and May, and prices for lubricating oil materials rose sharply.

The intermediate foods and feeds index was unchanged after a steep increase in May. Higher prices for refined sugar used in food manufacturing, corn syrup, refined vegetable oils, and flour were offset by lower prices for feeds.

Crude materials

The Producer Price Index for crude materials for further processing increased 0.3 percent in June on a seasonally adjusted basis, following a 1.3 percent increase in May. Foodstuff price increases slowed after turning up in May, crude energy materials prices continued to rise, but prices for other materials fell sharply for the fourth consecutive month.

The index for crude foodstuffs and feedstuffs increased 1.1 percent, following a 2.4 percent increase in May. Most of the increase was due to an upturn in livestock prices, which had fallen in each of the previous 3 months. On the other hand, raw sugar prices dropped 11.8 percent after soaring 42.5 percent in May and 16.0 percent in April. Prices for wheat, green coffee, and soybeans also turned down after May advances. Poultry and cocoa beans continued to move down.

Prices for crude energy materials rose 1.1 percent, somewhat less than the 1.6 percent advance in the preceding month. Natural gas prices increased much less than in May, but crude petroleum prices advanced slightly more.

The index for crude nonfood materials less energy declined 3.7 percent, roughly the same as the average monthly decrease of 4.3 percent in the 3 preceding months. Cotton prices fell more than 10 percent following April and May increases, and prices for iron and steel scrap, aluminum base scrap, and wastepaper all continued to decrease rapidly. Natural rubber prices also dropped. In contrast, prices for hide and skins jumped 15.0 percent, following declines of more than 10 percent in each of the preceding 4 months. Prices for copper base scrap, sand and gravel, and potash also rose.

[1] Comprehensive relative importance figures are computed once each year in December. Data shown are expressed as a percent of total finished goods, total intermediate materials, or total crude materials. Data shown will not add up to 100.000 because not all commodity components of each stage-of-processing (SOP) index are shown; relative importance figures shown account for about 87 percent of total finished goods, about 89 percent of total intermediate materials, and about 96 percent of total crude materials. For each commodity component of the Finished Goods Index which is allocated to both capital equipment and finished consumer goods excluding foods, the relative importance figure shown reflects only the share allocated to the SOP grouping under which it is listed. For example, the relative importance figure shown for household furniture under the SOP grouping for finished consumer goods excluding foods includes the share allocated to that SOP grouping but not the share allocated to capital equipment.

[1] Industry and product class indexes may include products not shown separately.

[2] Data for February 1980 have been revised to reflect the availability of late reports and corrections by respondents. In addition, indexes based on December 1979 = 100 have been corrected for January, February, and March 1980 because of revisions in December 1979 prices; these indexes are still subject to revision on the normal schedule. All data are subject to revision 4 months after original publication. Data are not seasonally adjusted.

[3] Not available.

[4] Seasonal product—no price available this month.

[5] Detailed product indexes for industries 2075, 2711, 3272, and 3633 are no longer based on December 1977 = 100. The new base, December 1979 = 100, is consistent with the base of the higher level indexes.

NOTE: Indexes in this table are calculated by a revised methodology. See "Technical Note on Data from the Producer Price Index Revision" at the back of this publication.

[1] Indexes with a commodity point code of .99 are calculated by a revised methodology. See "Technical Note on Data from the Producer Price Index Revision" at the back of this publication.

[2] Data for February 1980 have been revised to reflect the availability of late reports and corrections by respondents. Data are not seasonally adjusted.

[3] Seasonal commodity—no price available this month.

[4] Some of the titles of the individual commodity price indexes included in this grouping are not shown.

[5] Not available.

[6] Prices for some items in this grouping are lagged 1 month.

[7] Regional price indexes for bituminous coal, industrial sizes, contract are presented in table 8 of this report.

[8] Prices for natural gas (05-31) are lagged 1 month.

[9] Includes only domestic production. Some prices are lagged 1 month.

[10] Prices for gasoline (05-71), light distillate (05-72), middle distillate (05-73), and residual fuels (05-74) are lagged 1 month.

[11] Regional refined petroleum product prices and price indexes are presented in table 7 of this report.

[12] Some prices for industrial chemicals (06-1) are lagged 1 month.

N.E.C. Not elsewhere classified.

[1] These indexes are calculated by combining the indexes listed below by commodity code after each special commodity grouping (titles in table 6). The weights are those used for the comprehensive All Commodities index.

[2] Data for February 1980 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication.

All commodities, less farm products: 02 through 15

All foods: 01-1, 01-7, and 02 less 02-61, 02-62, and 02-9

Processed foods: 02 less 02-61, 02-62, and 02-9

Industrial commodities, less fuels and power: 03, 04, and 06 through 15

Selected textile mill products: 03-27, 03-37-01-05, 03-37-01-07, 03-37-01-09, 03-37-01-11, 03-37-03-42, 03-4, 03-81-01-55, 03-81-01-72, 03-81-01-73, 03-81-02-39, 03-81-02-72, 03-81-02-74, 03-81-03-62, 03-81-03-64, 03-82-01, 03-82-02, 03-83-03-22, 03-83-03-42, and 12-31

Hosiery: 03-81-01-72, 03-81-01-73, 03-81-02-74, 03-81-03-64

Underwear and nightwear: 03-81-01-74, 03-81-01-75, 03-81-01-76, 03-81-01-77, 03-81-01-78, 03-81-02-74, 03-81-02-75, 03-81-02-76, and 03-81-03-62

Chemicals and allied products, including synthetic rubber and synthetic fibers: 03-1, 06 less 06-4, and 07-11-02

Pharmaceutical preparations: 06-35 and 06-36

Lumber and wood products, excluding millwork and other wood products: 08-1 and 08-3

Special metals and metal products: 10, 11-1, and 14-1

Fabricated metal products: 10-3, 10-4, 10-5, 10-6, 10-7, and 10-8

Copper and copper products: 10-22-01-06, 10-22-01-08, 10-22-01-13, 10-23-01, 10-24-01-06, 10-25-02, and 10-26-01

Machinery and motive products: 11 and 14

Machinery and equipment, except electrical: 11-1, 11-2, 11-3, 11-4, 11-6, 11-9

Agricultural machinery, including tractors: 11-11, 11-12 less 11-11-51 and 11-12-51

Metalworking machinery: 11-32, 11-33-04, 11-37, and 11-38

Numerically controlled machine tools: 11-37-11-11, 11-37-11-12, 11-37-14-11, and 11-37-16

Total tractors: 11-11 and 11-26 less 11-11-51

Industrial valves: 11-49-01-01 through 11-49-01-06, 11-49-01-16 through 11-49-01-19, 11-49-01-21 through 11-49-01-27

Industrial fittings: 11-49-01-11 through 11-49-01-15

Abrasive grinding wheels: 11-36-11, 11-36-12, 11-36-13, 11-36-14, 11-36-15

Agricultural machinery and equipment, less parts (old commodity code 11-1): 11-1 less 11-11-51 and 11-12-51

Farm and garden tractors, less parts (old commodity code 11-11): 11-11 less 11-11-51

Agricultural machinery excluding tractors, less parts (old commodity code 11-12): 11-12 less 11-12-51

Construction materials: 06-21, 07-21, 08-11, 08-12-01-01, 08-12-01-02, 08-12-01-31, 08-12-01-71, 08-2, 08-3, 09-2, 10-13-02-39, 10-13-02-48 10-13-02-55, 10-13-02-63, 10-13-02-69, 10-13-02-71, 10-13-02-89, 10-13-02-91, 10-15-01-31, 10-15-01-32, 10-15-01-33, 10-25-01-01, 10-25-01-03, 10-25-01-04, 10-25-01-05, 10-25-01-17, 10-25-01-18, 10-25-01-19, 10-25-01-21, 10-25-01-23, 10-25-02-51, 10-25-02-52, 10-25-19-93, 10-26-01-06, 10-26-01-07, 10-26-01-09, 10-26-01-11, 10-26-02-67, 10-26-02-71, 10-41-01, 10-5, 10-6, 10-71, 10-73-01-01, 10-73-01-06, 10-73-01-11, 10-73-01-12, 10-73-01-13, 10-73-01-14, 10-73-01-15, 10-73-01-55, 10-73-01-57, 10-74-01-01, 10-74-01-31, 10-74-01-81, 10-74-01-82, 10-74-01-87, 10-74-01-91, 10-74-01-95, 10-81-01-46, 10-83-01-01, 10-83-01-03, 10-83-01-05, 10-83-01-07, 10-83-01-09, 10-81-01-11, 10-83-01-21, 10-83-01-23, 10-83-01-31, 10-83-01-33, 10-83-01-35, 10-83-01-37, 10-83-01-41, 10-83-01-46, 10-83-01-48, 10-89-01-26, 10-89-01-33, 10-89-01-51, 11-42, 11-47, 11-49-01-02, 11-49-01-06, 11-49-01-12, 11-49-01-15, 11-71-01-01, 11-71-01-02, 11-71-01-03, 11-71-01-04, 11-71-02-65, 11-71-02-71, 11-71-02-73, 12-11-01-06, 12-32, 13-11-01-01, 13-11-02-07, 13-2, 13-3, 13-4, 13-6, 13-7, 13-91, 13-92, 13-93

Table 10. Producer price indexes: Changes in commodity specifications, June 1980

Commodity code	New specification	Old specification
02-21-01-01	Beef carcass, prime 500-800 pounds; slaughterers, branch houses, and wholesalers to all classes of customers (retail dealers, hotel supply houses and others): East Coast. Weekly average price, 100 lbs.	Beef carcass, prime, 700-800 pounds; slaughterers, branch houses, and wholesalers to all classes of customers (retail dealers, hotel supply houses and others): East Coast, weekly average price, 100 lbs.
03-26-03-42	Spun polyester, 15 denier, 1.50/1 ply or 2/2-2-2.25/2 ply non-heatset; manufacturer to manufacturer or tufter, 1,000 pounds or more, f.o.b. mill, freight allowed or prepaid, pound.	Spun polyester, 15 denier, 2/2-2.25/2 ply, non-heatset; manufacturer to manufacturer or tufter, 1,000 pounds or more, f.o.b. mill, freight allowed or prepaid, pound.
11-78-24-03	Connector cylindrical, receptical, plug or mated pair, various sizes, solder or crimp type contacts; manufacturer to original equipment manufacturer, in various quantities, f.o.b. factory, pair.	Connector cylindrical, box mount type, plug and shell size 22, 55 solder or crimp type contacts, receptical and plug; manufacturer to original equipment manufacturer, in various quantities, f.o.b. factory.
11-92-03-41	Rock drill, pneumatic, portable, dry; manufacturer to dealer or distributor, f.o.b. factory or f.o.b factory or shipping point with specified freight allowance, each.	Rock drill, pneumatic, portable 45 pounds, dry; manufacturer to dealer or distributor, f.o.b factory or f.o.b. factory or shipping point with specified freight allowance, each.
11-92-03-42	Rock drill, boom mounted, approximately 1 1/4" to 5 1/4" bore, 60 to 100 feed, air or hydraulically operated boom; manufacturer to user, dealer or distributor, f.o.b. factory or shipping point with various freight allowances, each.	Rock drill, boom mounted, approximately 2 1/2" to 5 1/4" bore, 60 to 100 feed, air or hydraulically operated boom; manufacturer to user, dealer or distributor, f.o.b. factory or shipping point with various freight allowances, each.
11-94-03-24	Diesel engine, stationary low speed, over 600 h.p. at 250-1,300 r.p.m., 4 cycle. 6-16 cylinders with or without turbo supercharger; manufacturer to user, original equipment manufacturer or distributor, f.o.b. factory, each.	Diesel engine, stationary low speed, over 600 h.p. at 250-1,300 r.p.m., 4 cycle, 6-16 cylinders with or without turbo supercharger; manufacturer to user, original equipment manufacturer or distributor, f.o.b. factory, each.
12-44-01-11	Toaster, automatic, pop-up; manufacturer to wholesaler distributor, or dealer, f.o.b. factory, f.o.b. factory with specified freight allowance, or f.o.b. factory with freight prepaid, each.	Toaster, automatic, pop-up; manufacturer to wholesaler or distributor, f.o.b. factory, f.o.b. factory with specified freight allowance, or f.o.b factory with freight prepaid, each.
12-44-01-15	Frying pan, automatic, electric with metal top, coated or uncoated inside; manufacturer to distributor or dealer, f.o.b. factory, or f.o.b. factory with freight prepaid or allowed in specified quantities, each.	Frying pan, automatic, electric with metal top, coated or uncoated inside; manufacturer to distributor, f.o.b. factory or f.o.b. factory with freight prepaid or allowed on specified quantities, each.
12-44-01-16	Portable mixer, electric; manufacturer to wholesaler, retailer, or dealer, f.o.b. factory, f.o.b. factory or nearest warehouse or f.o.b. factory with freight allowed on specified quantities, each.	Portable mixer, electric; manufacturer to wholesaler or retailer, f.o.b. factory or f.o.b. factory or nearest warehouse, each.
12-44-01-22	Iron, electric, steam and dry; manufacturer to distributor or dealer, f.o.b. factory or point of shipment, or f.o.b. factory with freight allowed on specified amounts, each.	Iron, electric, steam and dry; manufacturer to distributor, f.o.b. factory or point of shipment, or f.o.b. factory with freight allowed on specified amounts, each.
12-44-01-24	Toothbrush, electric, cordless; manufacturer to wholesaler, distributor, or dealer, f.o.b. factory or factory with freight allowed on specified amounts, each.	Toothbrush, electric, cordless; manufacturer to wholesaler or distributor, f.o.b. factory, each.
12-44-01-28	Hair dryers, portable, bonnet-type; manufacturer to distributor or dealer, f.o.b. factory or freight prepaid, or f.o.b. factory, each.	Hair dryers, portable, bonnet-type; manufacturer to distributor, f.o.b. factory or freight prepaid, each.

NOTE: The index is designed to measure changes in the prices of shipping goods by rail in the United States. The representative prices and sample used for the index reflect the railroads' prices for shipping a fixed set of commodities under specified and unchanging conditions. The index is not intended to measure changes in railroad revenue or shipper costs that result from changes in services or mode.

Brief Explanation of Producer Price Indexes

Producer Price Indexes measure average changes in prices received in primary markets of the United States by producers of commodities in all stages of processing. These data were previously presented as the Wholesale Price Index. The name "Producer Price Indexes" is now being used to reflect more accurately the coverage of the data. The sample used for calculating these indexes continues to contain nearly 2,800 commodities and about 10,000 quotations selected to represent the movement of prices of all commodities produced in the manufacturing, agriculture, forestry, fishing, mining, gas and electricity, and public utilities sectors. The universe includes all commodities produced or imported for sale in commercial transactions in primary markets in the United States.

Producer Price Indexes can be organized by stage of processing or by commodity. The stage-of-processing structure organizes products by degree of fabrication (i.e., finished goods, intermediate or semifinished goods, and crude materials). The commodity structure organizes products by similarity of end-use or material composition.

Finished goods are commodities that will not undergo further processing and are ready for sale to the ultimate user, either an individual consumer or a business firm. Capital equipment (formerly called producer finished goods) includes commodities such as motor trucks, farm equipment, and machine tools. Finished consumer goods include foods and other types of goods eventually purchased by retailers and used by consumers. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durables such as automobiles, household furniture, and jewelry, and nondurables such as apparel and gasoline.

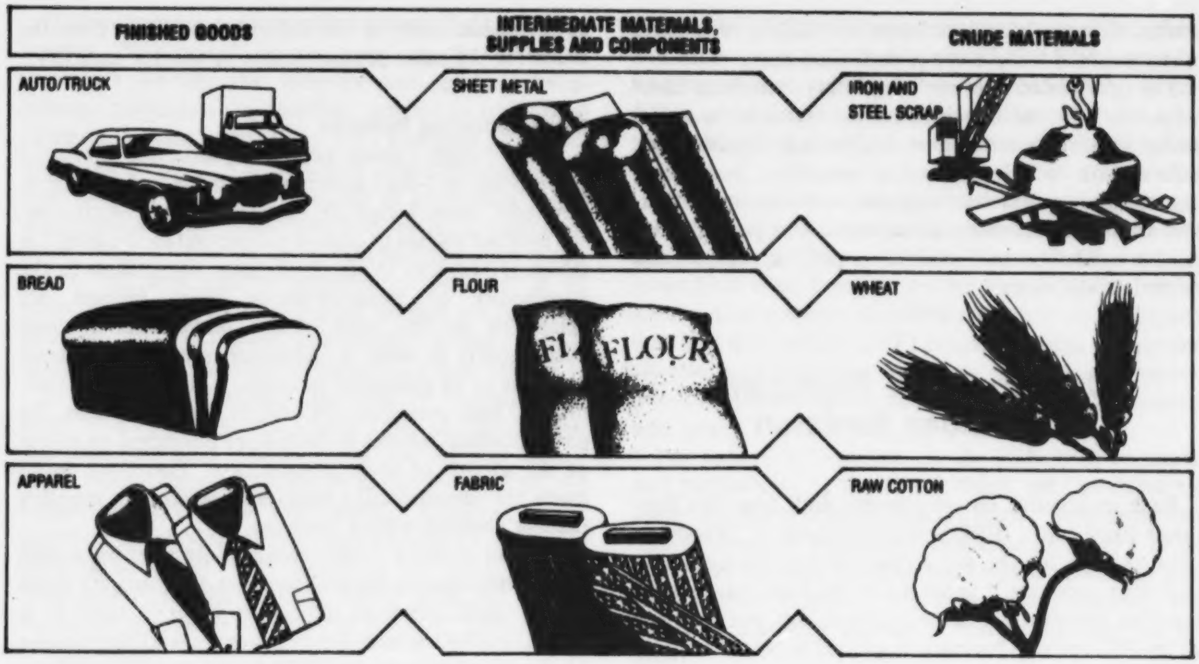
Intermediate materials, supplies, and components are commodities that have been processed but require further processing before they become finished goods. Examples of such semifinished goods include flour, cotton yarns, steel mill products, belts and belting, lumber, liquefied petroleum gas, paper boxes, and motor vehicle parts.

Crude materials for further processing include products entering the market for the first time which have not been manufactured or fabricated but will be processed before becoming finished goods. Scrap materials are also included. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, natural gas, hides and skins, and iron and steel scrap.

For analysis of general price trends, stage-of-processing indexes are more useful than commodity grouping indexes. This is because commodity grouping indexes sometimes produce exaggerated or misleading signals of price changes by reflecting the same price movement through various stages of processing. For example, suppose that a price rise for steel scrap results in an increase in the price of steel sheet and then an advance in prices of automobiles produced from that steel. The All Commodities Price Index and the Industrial Commodities Price Index would reflect the same price movement three times—once for the steel scrap, once for the steel sheet, and once for the automobiles. This multiple counting occurs because the weighting structure for the All Commodities Index uses the total shipment values for all commodities at all stages of processing. On the other hand, the Finished Goods Price Index would reflect the change in automobile prices, the Intermediate Materials Price Index would reflect the steel sheet price change, and the Crude Materials Price Index would reflect the rise in the price of steel scrap. (See illustration.)

To the extent possible, prices used in calculating Producer Price Indexes apply to the first significant commercial transaction in the United States, from the production or central marketing point. Price data are generally collected monthly, primarily by mail questionnaire. Respondents are asked to provide net prices or to provide all applicable discounts. BLS attempts to base Producer Price Indexes on actual transaction prices; however, list or book prices are used if transaction prices are not available. Most prices are obtained directly from producing companies on a voluntary and confidential basis, but some prices are taken from trade publications or from other Government agencies. Prices generally are reported for the Tuesday of the week containing the 13th day of the month.

In calculating Producer Price Indexes, price changes for the various commodities are averaged together with weights representing their importance in the total net selling value of all commodities as of 1972. The detailed



data are aggregated to obtain indexes for stage-of-processing groupings, commodity groupings, durability of product groupings, and a number of special composite groupings. Each index measures price changes from a reference period which equals 100.0 (usually 1967, as designated by the Office of Management and Budget). An increase of 125 percent from the reference period in the Finished Goods Price Index, for example, is shown as 225.0. This change can also be expressed in dollars, as follows: "The price of a representative sample of finished goods sold in primary markets in the United States has risen from $100 in 1967 to $225."

Calculating Index Changes

Movements of price indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period, while percent changes are not. The box shows the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates that are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change	
Finished Goods Price Index	185.5
less previous index	184.5
equals index point change	1.0
Index Percent Change	
Index point change	1.0
divided by the previous index	184.5
equals	0.005
result multiplied by 100	0.005 x 100
equals index percent change	0.5

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted data usually are preferred because they eliminate the effect of changes that normally occur at about the same time and in about the same magnitude every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For this reason, seasonally adjusted data more clearly reveal the underlying cyclical

☆U.S. GOVERNMENT PRINTING OFFICE: 1980 311-408/9 1-3

trends. Seasonally adjusted data are subject to revision when seasonal factors are revised each year.

The unadjusted data are of primary interest to users who need information which can be related to the actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. Unadjusted data generally are used in escalating contracts such as purchase agreements or real estate leases.

Data from the Producer Price Index Revision

Each month this report presents data from the Producer Price Index (PPI) revision in table 4, "Producer price indexes for the net output of selected industries and their products." Indexes for the four industries in the pilot program to test the methodology and concepts of the PPI revision formerly appeared in table 14. Table 4 includes data for additional Standard Industrial Classification (SIC) industries (4-digit level) and Census products (7-digit level); indexes for Census product classes (5- and 6-digit levels) and more detailed subproducts (9-digit level); and, for some industries, indexes for other sources of revenue. Thus, table 4 shows all official indexes arising from the ongoing PPI revision. By 1985, table 4 will cover all 493 SIC mining and manufacturing industries.

Traditional commodity price indexes and Industry-Sector Price Indexes (ISPI's) will continue to be published. In 1983, however, an entirely new structure will replace the traditional commodity structure as the primary vehicle for releasing and analyzing price changes at the primary market level.

Kinds of product indexes

Industries listed in table 4 may be represented by one to three kinds of product indexes. Every industry has *primary product indexes* to show changes in prices received by establishments classified in the industry for products made primarily, but not exclusively, within that industry. To be classified in an industry, an establishment must have a plurality of its total shipment value accounted for by primary products. In addition, some industries also may have *secondary product indexes* to show changes in prices received by establishments classified in the industry for products primary to some other industry. Finally, some industries have *miscellaneous receipts indexes* to show price changes in other sources of revenue received by establishments within the industry which are not derived from the sale of their products. Because of the distinction between primary and secondary products, an index for a product made in one industry may differ from the index for the same product made in another industry.

Corresponding indexes

Some 7-digit Census products published in table 4 correspond to 8-digit commodities published in table 6. Similarly, some 4-digit SIC industries and 5-digit Census product classes in table 4 correspond to the ISPI's in tables 11, 12, and 13. In these cases, movements in the commodity or Industry-Sector Price Indexes are calculated on the basis of the movements of their counterparts in table 4. Although most such indexes continue to be published in tables, 6, 11, or 13 on their original base period of 1967=100 or some later base, the corresponding indexes in table 4 are published on a base of the month of their introduction. Therefore, index levels for corresponding items may differ, but monthly percent changes will be identical.

A point code of ".99" immediately after an 8-digit commodity code in table 6 identifies a commodity index that is calculated from a product index in table 4. A footnote after the industry or product class title in tables 11, 12, or 13 indicates an ISPI based on an index from table 4. The aggregation of commodity price indexes into commodity grouping indexes in table 6 continues to follow the traditional methodology; similarly, stage-of-processing price indexes in table 1 also are calculated from the commodity grouping indexes as in the past.

How new indexes differ from traditional commodity indexes

New indexes differ from traditional commodity indexes in a number of respects:

(1) New indexes are *industry-based*. The entire output of each industry is sampled, including primary and secondary production and miscellaneous receipts. Traditional commodity indexes are based on a selection of the most important commodities, and most Industry-Sector Price Indexes continue to be calculated from these traditional commodity indexes. In addition, traditional ISPI's do not cover miscellaneous receipts, and prices of products are included without systematic regard for the industry classification of the producer. New indexes, on the other hand, are based on prices of primary and secondary products made by producers classified in the specified industry; as a result, new indexes apply to production within the specified industry. As data from more mining and manufacturing industries become available, additional indexes will be constructed to cover each product regardless of the industry of origin.

(2) New indexes are easier to use with other industry-oriented economic data because they are *classified according to the SIC* and incorporate most features of the Census of Manufactures product code extensions of the SIC.

(3) New indexes use *net output values of shipments as weights.* Net output values refer to the value of shipments leaving the industry and exclude intra-industry shipments. In contrast, weights in traditional commodity price indexes and ISPI's include shipments within an industry. The resulting multiple-counting of price changes at successive stages of processing is one major defect of the traditional commodity grouping indexes. Stage-of-processing indexes partially correct this defect, but new indexes consistently correct it at all levels of aggregation. (Net output weights are not used, however, for traditional commodity indexes whose movements are based on corresponding new indexes.)

In the revision program, the relative importance of items within a product is based upon shipment value data and sampling weights from the revision survey itself. When detailed products are aggregated to the 5-digit product class and 4-digit industry levels, however, weights are taken from Census of Manufactures data, along with estimates of intra-industry shipments from input-output tables produced by the Bureau of Economic Analysis of the U.S. Department of Commerce.

(4) New indexes emphasize *actual transaction prices at the time of shipment* to minimize the use of list prices and order prices, which occasionally have been used in traditional commodity price indexes and ISPI's. In addition, some traditional indexes have been calculated intentionally from order prices rather than from shipment prices.

(5) New indexes are based on prices reported by companies of all sizes and locations selected by *probability sampling.* In addition, individual items and transaction terms from these firms are chosen by probability techniques. (Estimates of sampling error will be published later.) In the traditional PPI program, major companies selected on a judgment basis have been asked to report prices for volume-selling items under "typical" transaction terms.

For further information on the underlying concepts and methodolgy of the PPI revision, see two *Monthly Labor Review* articles by John F. Early: "Improving the Measurement of Producer Price Change," April 1978; and "The Producer Price Index Revision: Overview and Pilot Survey Results," December 1979. Employment Projections for the
1980's

Subjects include:

The labor force—expected changes in size and composition as a result of the continuing impact of the post-World War II baby boom, the increased participation of women, and the drop in the birth rate during the 1960's.

Gross national product and income—projected trends and major underlying assumptions on fiscal policy, productivity, and other factors affecting aggregate demand.

Industry output and employment—gross product originating in major sectors; employment in 149 industries

Distribution of demand—changing patterns in the major sectors of consumption, business investment, government expenditures, and foreign trade, and in 162 industries.

Four articles from the *Monthly Labor Review* and additional tables project the United States economy to 1990—growth, employment, output, income, and demand over the next decade.

Price Movements
July 1980

The Producer Price Index for Finished Goods advanced 1.7 percent from June to July on a seasonally adjusted basis. The July climb followed average monthly increases of 0.5 percemt during the second quarter and 1.5 percent during the first 3 months of the year. Prices for intermediate (semifinished) goods increased 0.8 percent, the same as in the preceding month. Crude material prices jumped 6.3 percent, far more than in any other month for the last 6 years (table A).

Most of the acceleration in the Finished Goods Price Index in July was caused by a 3.8 percent rise in consumer food prices; in contrast, food prices had declined at an annual rate of 4.6 percent during the first half of 1980. Prices for finished goods other than foods rose 1.1 percent, as the indexes for capital equipment and for finished consumer goods other than foods both rose more than in either of the 2 previous months. Prices for finished energy goods, however, declined slightly for the second consecutive month (tableB).

Before seasonal adjustment, the Producer Price Index for Finished Goods moved up 1.6 percent to 246.6 (1967=100). Over the year, the Finished Goods Price Index rose 14.1 percent. The index for finished consumer foods was up 6.5 percent from July 1979 to July 1980, energy prices climbed 54.5 percent, the index for finished consumer goods other than foods and energy increased 12.2 percent, and capital equipment prices rose 10.6 percent. The Producer Price Index for intermediate goods moved up 14.6 percent over the year, and crude material prices were 10.2 percent higher than a year ago.

Finished goods

Finished consumer goods. The Producer Price Index for finished consumer goods rose 1.8 percent in July on a seasonally adjusted basis, considerably more than in either June (0.7 percent) or May (0.4 percent). The pronounced acceleration from June to July was mostly due to a 3.8 percent advance for the finished foods index, the sharpest

increase since November 1974. This acceleration partly reflected the effects of an unusually hot and dry summer in much of the country. Poultry prices jumped 23.5 percent, as millions of chickens were killed by the intense heat. Prices rose more than in June for both beef and veal (7.4 vs. 3.9 percent) and pork (13.7 vs. 0.8 percent). Prices turned up sharply after declining in June for fresh fruits and eggs. On the other hand, prices turned down for refined sugar in consumer size packages and roasted coffee. Milled rice prices declined for the fourth consecutive month. Fresh vegetable prices rose much less than in either of the 2 preceding months, as steep climbs for potatoes and carrots were largely offset by lower prices for other vegetables.

The index for finished consumer goods other than foods rose 0.9 percent, more than in either June or May. Among nonenergy goods, prices rose more than in June for passenger cars, apparel, nonalcoholic beverages, sanitary papers and health products, tobacco products, household furniture, and drugs. Prices turned up after declining in June for textile housefurnishings and costume jewelry. On the other hand, gold jewelry prices advanced much less than a month earlier.

Prices for energy goods, however, declined 0.6 percent for the second month in a row. These decreases followed a steady rise of nearly 75 percent during the 12 months ended in May. Gasoline prices fell 1.2 percent in July, and home heating oil prices were virtually unchanged.

Capital equipment. The index for capital equipment moved up 1.3 percent, after rising 0.9 percent in June and showing no change in May. Most of the acceleration was caused by a 3.2 percent rise in motor truck prices, following no change in the previous month. Price increases also accelerated for construction machinery, food products machinery, transformers and power regulators, oilfield machinery, and railroad equipment. On the other hand, prices rose more slowly for hand tools, unitary air conditioners, and generators and generator sets.

Intermediate materials

The Producer Price Index for intermediate materials, supplies, and components rose 0.8 percent in July on a seasonally adjusted basis, the same as in June. Large increases for some energy products and foods and feeds were partly offset by moderating prices in other categories.

The intermediate energy index advanced 2.6 percent, following more modest increases in the previous 3 months. Residual fuel prices jumped 12.4 percent, after falling at a 41.0 percent annual rate in the second quarter. Higher prices were also recorded for electric power, commercial jet fuel, and diesel fuel.

The intermediate foods and feeds index climbed 3.2 percent, after showing no change in June. Feed prices advanced 9.9 percent, following a sharp drop in June. Prices for refined vegetable oils, corn syrup, and flour also rose. On the other hand, the indexes for refined sugar used in food manufacturing and animal fats and oils fell steeply.

The index for intermediate materials less foods and energy moved up 0.3 percent, less than the 0.9 percent June increase but about as much as in each of the 3 months prior to that. The durable manufacturing materials index declined 0.4 percent, largely because of a drop in prices for steel mill products. Silver prices decreased 2.8 percent after climbing 22.4 percent in the previous month, and gold prices rose much less than in June. Prices also declined for aluminum castings, lead, zinc, ferromanganese, and hardwood lumber. In contrast, higher prices were recorded for jewelers' materials, steel castings, and copper.

The nondurable manufacturing materials index moved up 0.3 percent, the smallest advance in over 2 years. Prices for plastic resins and materials and paperboard declined. The industrial chemicals index was virtually unchanged; industrial chemical prices had risen at an annual rate of almost 27 percent from December 1978 to June 1980. In contrast, prices for finished fabrics, synthetic fibers, leather, and pharmaceutical materials all rose more than in June.

The construction materials index increased 0.5 percent, after a 1.3 percent advance in the previous month. This slowdown was partly due to slight decreases in the indexes for copper wire and cable, bituminous paving materials, concrete products, and gypsum products. In addition, plywood prices rose much less than during either of the 2 preceding months. On the other hand, price increases accelerated for softwood lumber, millwork, and asphalt roofing.

Among other intermediate goods, large advances occurred for paper boxes and containers, electric motors, internal combustion engines, nonfarm tractor parts, electric lamps and bulbs, and metal forming machine tool parts. Price increases slowed, however, for several other items such as bearings, and prices for mining machinery parts and wooden pallets fell.

Crude materials

The Producer Price Index for crude materials for further processing accelerated sharply to a 6.3 percent increase in July on a seasonally adjusted basis. Foodstuff prices increased substantially following a small increase in June, prices for materials other than food and energy turned up substantially after falling for 4 consecutive months, and crude energy material prices continued to rise.

The index for crude foodstuff and feedstuff climbed 9.0 percent, following considerably smaller rises in May and June. During the first 4 months of the year, this index had decreased at an annual rate of 27.8 percent. Grain prices jumped 13.7 percent in July, after falling in 4 of the first 6 months of the year; sharply higher corn prices resulting from the Midwestern drought were primarily responsible for this turnaround. Live poultry prices moved up 27.5 percent as unusually hot weather killed millions of chickens, and soybean prices climbed about 25 percent because of heat-related damage. Hog prices advanced 26.0 percent following a 13.0 percent climb in June, and cattle price increases also accelerated. On the other hand, green coffee and raw cane sugar prices fell for the second consecutive month. Cocoa bean prices also fell.

The index for crude nonfood materials less energy increased 7.1 percent, after falling at an annual rate of nearly 40 percent during the preceding 4 months. Cotton prices rose about 9 percent, following a decrease of about 10 percent a month earlier. Prices for nonferrous and ferrous scrap metal also turned up, after falling sharply for several months. Prices for hides and skins rose more than 13 percent, almost as much as in the previous month. In contrast, wastepaper prices moved down substantially for the third consecutive month.

Prices for crude energy materials rose 1.4 percent, slightly more than the 1.1 percent rise in the preceding month. Natural gas prices moved up more than in June, but crude petroleum prices advanced much less.

Sample Changes July 1980

Indexes for six more industries are now being calculated from the comprehensive program to revise the Producer Price Index. Output price indexes are available for these industries and their major products beginning this month. The PPI revision program now covers 27 industries, which account for 7.8 percent of all mining and manufacturing production.

The industries being published for the first time in this phase of the PPI revision are the following:

Standard Industrial Classification (SIC) code	*Industry*
2051	Bread, cake, and related products
3331	Primary smelted and refined copper
3333	Primary refined and smelted zinc
3334	Primary aluminum
3341	Secondary smelted and refined nonferrous metals
3433	Nonelectric heating equipment

Product indexes from the above industries will now be used to calculate 14 corresponding traditional commodity indexes.

Indexes from the PPI revision program are published in this report in table 4. Traditional commodity price indexes and Industry-Sector Price Indexes (ISPI's) continue to be published. However, traditional indexes which correspond to the new indexes published in the revision program are now based on the movements of the corresponding revision indexes. (See tables C and D.) As new industries are published, their product indexes also will be used in the traditional commodity and ISPI structures.

The next set of indexes for industries based on the PPI revision program will be introduced in January 1981. In 1983, an entirely new industry-based stage-of-processing structure will become the primary vehicle for publishing and analyzing price changes at the primary market level.

See Technical Note, "Data from the Producer Price Index Revision," at the back of this publication for further detail.

In July, 187 new items were added to the list of commodities included in the PPI.[1] Price movements for these items are based on the corresponding product indexes introduced from the PPI revision prior to July. This brings the number of commodity indexes whose movements are based on data from the PPI revision to 257.

The number of changes by major commodity group is shown in the following tabulation:

[1] Comprehensive relative importance figures are computed once each year in December.

[2] Data for March 1980 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication.

[3] Not seasonally adjusted.

[4] Includes crude petroleum.

[5] Excludes crude petroleum.

[6] Percent of total finished goods.

[7] Percent of total intermediate materials.

[8] Formerly titled "Crude materials for further processing, excluding crude foodstuffs and feedstuffs, plant and animal fibers, oilseeds, and leaf tobacco."

[9] Percent of total crude materials.

[1] Comprehensive relative importance figures are computed once each year in December. Data shown are expressed as a percent of total finished goods, total intermediate materials, or total crude materials. Data shown will not add up to 100.000 because not all commodity components of each stage-of-processing (SOP) index are shown; relative importance figures shown account for about 87 percent of total finished goods, about 89 percent of total intermediate materials, and about 96 percent of total crude materials. For each commodity component of the Finished Goods Index which is allocated to both capital equipment and finished consumer goods excluding foods, the relative importance figure shown reflects only the share allocated to the SOP grouping under which it is listed. For example, the relative importance figure shown for household furniture under the SOP grouping for finished consumer goods excluding foods includes the share allocated to that SOP grouping but not the share allocated to capital equipment.

[1] Indexes with a commodity point code of .99 are calculated by a revised methodology. See "Technical Note on Data from the Producer Price Index Revision" at the back of this publication.

[2] Data for March 1980 have been revised to reflect the availability of late reports and corrections by respondents. Data are not seasonally adjusted.

[3] Seasonal commodity—no price available this month.

[4] Some of the titles of the individual commodity price indexes included in this grouping are not shown.

[5] Not available.

[6] Prices for some items in this grouping are lagged 1 month.

[7] Regional price indexes for bituminous coal, industrial sizes, contract are presented in table 8 of this report.

[8] Prices for natural gas (05-31) are lagged 1 month.

[9] Includes only domestic production. Some prices are lagged 1 month.

[10] Prices for gasoline (05-71), light distillate (05-72), middle distillate (05-73), and residual fuels (05-74) are lagged 1 month.

[11] Regional refined petroleum product prices and price indexes are presented in table 7 of this report.

[12] Some prices for industrial chemicals (06-1) are lagged 1 month

[1] Data for March 1980 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication. All prices are lagged 1 month. Data are not seasonally adjusted.

[2] Caution should be used in interpreting month-to-month changes because of low response rates, which ranged from 30 to 60 percent for these indexes.

Chemicals and allied products, including synthetic rubber and synthetic fibers: 03-1, 06 less 06-4, and 07-11-02

Pharmaceutical preparations: 06-35 and 06-36

Lumber and wood products, excluding millwork and other wood products: 08-1 and 08-3

Special metals and metal products: 10, 11-1, and 14-1

Fabricated metal products: 10-3, 10-4, 10-5, 10-6, 10-7, and 10-8

Copper and copper products: 10-22-01-06, 10-22-01-08, 10-22-01-13, 10-23-01, 10-24-01-06, 10-25-02, and 10-26-01

Machinery and motive products: 11 and 14

Machinery and equipment, except electrical: 11-1, 11-2, 11-3, 11-4, 11-6, 11-9

Agricultural machinery, including tractors: 11-11, 11-12 less 11-11-51 and 11-12-51

Metalworking machinery: 11-32, 11-33-04, 11-37, and 11-38

Numerically controlled machine tools: 11-37-11-11, 11-37-11-12, 11-37-14-11, and 11-37-16

Total tractors: 11-11 and 11-28 less 11-11-51

Industrial valves: 11-49-01-01 through 11-49-01-06, 11-49-01-16 through 11-49-01-19, 11-49-01-21 through 11-49-01-27

Industrial fittings: 11-49-01-11 through 11-49-01-15

Abrasive grinding wheels: 11-36-11, 11-36-12, 11-36-13, 11-36-14, 11-36-15

Agricultural machinery and equipment, less parts (old commodity code 11-1): 11-1 less 11-11-51 and 11-12-51

Farm and garden tractors, less parts (old commodity code 11-11): 11-11 less 11-11-51

Agricultural machinery excluding tractors, less parts (old commodity code 11-12): 11-12 less 11-12-51

[2] The price index for total railroad freight also includes STCC groups not shown separately.

[3] The figure shown for each item is its percent of total railroad freight.

NOTE: The index is designed to measure changes in the prices of shipping goods by rail in the United States. The representative prices and sample used for the index reflect the railroads' prices for shipping a fixed set of commodities under specified and unchanging conditions. The index is not intended to measure changes in railroad revenue or shipper costs that result from changes in services or mode.

Technical Notes

Brief Explanation of Producer Price Indexes

Producer Price Indexes measure average changes in prices received in primary markets of the United States by producers of commodities in all stages of processing. These data were previously presented as the Wholesale Price Index. The name "Producer Price Indexes" is now being used to reflect more accurately the coverage of the data. The sample used for calculating these indexes continues to contain nearly 2,800 commodities and about 10,000 quotations selected to represent the movement of prices of all commodities produced in the manufacturing, agriculture, forestry, fishing, mining, gas and electricity, and public utilities sectors. The universe includes all commodities produced or imported for sale in commercial transactions in primary markets in the United States.

Producer Price Indexes can be organized by stage of processing or by commodity. The stage-of-processing structure organizes products by degree of fabrication (i.e., finished goods, intermediate or semifinished goods, and crude materials). The commodity structure organizes products by similarity of end-use or material composition.

Finished goods are commodities that will not undergo further processing and are ready for sale to the ultimate user, either an individual consumer or a business firm. Capital equipment (formerly called producer finished goods) includes commodities such as motor trucks, farm equipment, and machine tools. Finished consumer goods include foods and other types of goods eventually purchased by retailers and used by consumers. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durables such as automobiles, household furniture, and jewelry, and nondurables such as apparel and gasoline.

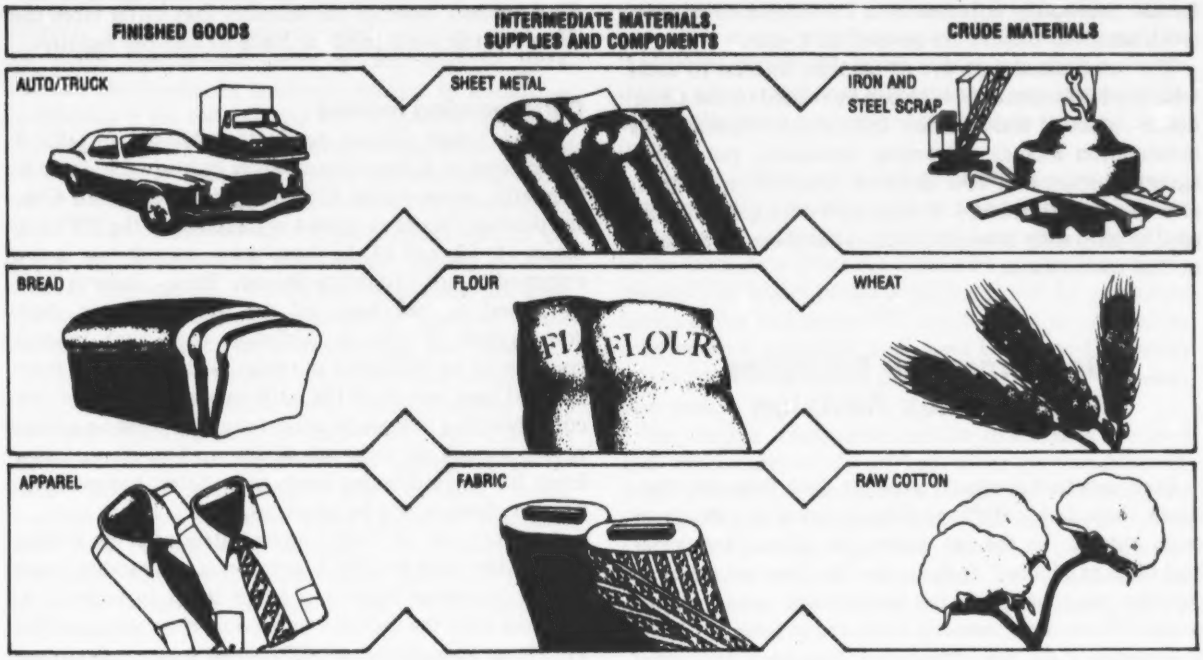
Intermediate materials, supplies, and components are commodities that have been processed but require further processing before they become finished goods. Examples of such semifinished goods include flour, cotton yarns, steel mill products, belts and belting, lumber, liquefied petroleum gas, paper boxes, and motor vehicle parts.

Crude materials for further processing include products entering the market for the first time which have not been manufactured or fabricated but will be processed before becoming finished goods. Scrap materials are also included. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, natural gas, hides and skins, and iron and steel scrap.

For analysis of general price trends, stage-of-processing indexes are more useful than commodity grouping indexes. This is because commodity grouping indexes sometimes produce exaggerated or misleading signals of price changes by reflecting the same price movement through various stages of processing. For example, suppose that a price rise for steel scrap results in an increase in the price of steel sheet and then an advance in prices of automobiles produced from that steel. The All Commodities Price Index and the Industrial Commodities Price Index would reflect the same price movement three times—once for the steel scrap, once for the steel sheet, and once for the automobiles. This multiple counting occurs because the weighting structure for the All Commodities Index uses the total shipment values for all commodities at all stages of processing. On the other hand, the Finished Goods Price Index would reflect the change in automobile prices, the Intermediate Materials Price Index would reflect the steel sheet price change, and the Crude Materials Price Index would reflect the rise in the price of steel scrap. (See illustration.)

To the extent possible, prices used in calculating Producer Price Indexes apply to the first significant commercial transaction in the United States, from the production or central marketing point. Price data are generally collected monthly, primarily by mail questionnaire. Respondents are asked to provide net prices or to provide all applicable discounts. BLS attempts to base Producer Price Indexes on actual transaction prices; however, list or book prices are used if transaction prices are not available. Most prices are obtained directly from producing companies on a voluntary and confidential basis, but some prices are taken from trade publications or from other Government agencies. Prices generally are reported for the Tuesday of the week containing the 13th day of the month.

In calculating Producer Price Indexes, price changes for the various commodities are averaged together with weights representing their importance in the total net selling value of all commodities as of 1972. The detailed



data are aggregated to obtain indexes for stage-of-processing groupings, commodity groupings, durability of product groupings, and a number of special composite groupings. Each index measures price changes from a reference period which equals 100.0 (usually 1967, as designated by the Office of Management and Budget). An increase of 125 percent from the reference period in the Finished Goods Price Index, for example, is shown as 225.0. This change can also be expressed in dollars, as follows: "The price of a representative sample of finished goods sold in primary markets in the United States has risen from $100 in 1967 to $225."

Calculating Index Changes

Movements of price indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period, while percent changes are not. The box shows the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates that are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change	
Finished Goods Price Index	185.5
less previous index	184.5
equals index point change	1.0
Index Percent Change	
Index point change	1.0
divided by the previous index	184.5
equals	0.005
result multiplied by 100	0.005 x 100
equals index percent change	0.5

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted data usually are preferred because they eliminate the effect of changes that normally occur at about the same time and in about the same magnitude every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For this reason, seasonally adjusted data more clearly reveal the underlying cyclical

trends. Seasonally adjusted data are subject to revision when seasonal factors are revised each year.

The unadjusted data are of primary interest to users who need information which can be related to the actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. Unadjusted data generally are used in escalating contracts such as purchase agreements or real estate leases.

Data from the Producer Price Index Revision

Each month this report presents data from the Producer Price Index (PPI) revision in table 4, "Producer price indexes for the net output of selected industries and their products." Indexes for the four industries in the pilot program to test the methodology and concepts of the PPI revision formerly appeared in table 14. Table 4 includes data for additional Standard Industrial Classification (SIC) industries (4-digit level) and Census products (7-digit level); indexes for Census product classes (5- and 6-digit levels) and more detailed subproducts (9-digit level); and, for some industries, indexes for other sources of revenue. Thus, table 4 shows all official indexes arising from the ongoing PPI revision. By 1985, table 4 will cover all 493 SIC mining and manufacturing industries.

Traditional commodity price indexes and Industry-Sector Price Indexes (ISPI's) will continue to be published. In 1983, however, an entirely new structure will replace the traditional commodity structure as the primary vehicle for releasing and analyzing price changes at the primary market level.

Kinds of product indexes

Industries listed in table 4 may be represented by one to three kinds of product indexes. Every industry has *primary product indexes* to show changes in prices received by establishments classified in the industry for products made primarily, but not exclusively, within that industry. To be classified in an industry, an establishment must have a plurality of its total shipment value accounted for by primary products. In addition, some industries also may have *secondary product indexes* to show changes in prices received by establishments classified in the industry for products primary to some other industry. Finally, some industries have *miscellaneous receipts indexes* to show price changes in other sources of revenue received by establishments within the industry which are not derived from the sale of their products. Because of the distinction between primary and secondary products, an index for a product made in one industry may differ from the index for the same product made in another industry.

Corresponding indexes

Some 7-digit Census products published in table 4 correspond to 8-digit commodities published in table 6. Similarly, some 4-digit SIC industries and 5-digit Census product classes in table 4 correspond to the ISPI's in tables 11, 12, and 13. In these cases, movements in the commodity or Industry-Sector Price Indexes are calculated on the basis of the movements of their counterparts in table 4. Although most such indexes continue to be published in tables, 6, 11, or 13 on their original base period of 1967=100 or some later base, the corresponding indexes in table 4 are published on a base of the month of their introduction. Therefore, index levels for corresponding items may differ, but monthly percent changes will be identical.

A point code of ".99" immediately after an 8-digit commodity code in table 6 identifies a commodity index that is calculated from a product index in table 4. A footnote after the industry or product class title in tables 11, 12, or 13 indicates an ISPI based on an index from table 4. The aggregation of commodity price indexes into commodity grouping indexes in table 6 continues to follow the traditional methodology; similarly, stage-of-processing price indexes in table 1 also are calculated from the commodity grouping indexes as in the past.

How new indexes differ from traditional commodity indexes

New indexes differ from traditional commodity indexes in a number of respects:

(1) New indexes are *industry-based.* The entire output of each industry is sampled, including primary and secondary production and miscellaneous receipts. Traditional commodity indexes are based on a selection of the most important commodities, and most Industry-Sector Price Indexes continue to be calculated from these traditional commodity indexes. In addition, traditional ISPI's do not cover miscellaneous receipts, and prices of products are included without systematic regard for the industry classification of the producer. New indexes, on the other hand, are based on prices of primary and secondary products made by producers classified in the specified industry; as a result, new indexes apply to production within the specified industry. As data from more mining and manufacturing industries become available, additional indexes will be constructed to cover each product regardless of the industry of origin.

(2) New indexes are easier to use with other industry-oriented economic data because they are *classified according to the SIC* and incorporate most features of the Census of Manufactures product code extensions of the SIC.

(3) New indexes use *net output values of shipments as weights*. Net output values refer to the value of shipments leaving the industry and exclude intra-industry shipments. In contrast, weights in traditional commodity price indexes and ISPI's include shipments within an industry. The resulting multiple-counting of price changes at successive stages of processing is one major defect of the traditional commodity grouping indexes. Stage-of-processing indexes partially correct this defect, but new indexes consistently correct it at all levels of aggregation. (Net output weights are not used, however, for traditional commodity indexes whose movements are based on corresponding new indexes.)

In the revision program, the relative importance of items within a product is based upon shipment value data and sampling weights from the revision survey itself. When detailed products are aggregated to the 5-digit product class and 4-digit industry levels, however, weights are taken from Census of Manufactures data, along with estimates of intra-industry shipments from input-output tables produced by the Bureau of Economic Analysis of the U.S. Department of Commerce.

(4) New indexes emphasize *actual transaction prices at the time of shipment* to minimize the use of list prices and order prices, which occasionally have been used in traditional commodity price indexes and ISPI's. In addition, some traditional indexes have been calculated intentionally from order prices rather than from shipment prices.

(5) New indexes are based on prices reported by companies of all sizes and locations selected by *probability sampling*. In addition, individual items and transaction terms from these firms are chosen by probability techniques. (Estimates of sampling error will be published later.) In the traditional PPI program, major companies selected on a judgment basis have been asked to report prices for volume-selling items under "typical" transaction terms.

Early: "Improving the Measurement of Producer Price Change," April 1978; and "The Producer Price Index Revision: Overview and Pilot Survey Results," December 1979. Price Movements
August 1980

The Producer Price Index for Finished Goods moved up 1.5 percent from July to August on a seasonally adjusted basis. This followed a 1.7 percent increase in July. Prices for intermediate (semifinished) goods moved up 1.0 percent, after rising 0.8 percent in both June and July. Crude material prices jumped 5.7 percent, the second consecutive steep monthly rise (table A).

Nearly two-thirds of the August movement in the Finished Goods Price Index was caused by a 4.4 percent climb in food prices, an even sharper advance than in July. In contrast, price increases moderated somewhat for finished goods other than foods, reflecting slower rises for both capital equipment and consumer goods other than foods. Energy prices edged up slightly, following small declines in June and July (table B).

Before seasonal adjustment, the Finished Goods Price Index moved up 1.0 percent to 249.0 (1967=100). Over the year, this index rose 14.6 percent. The index for finished consumer foods was up 9.6 percent from August 1979 to August 1980, energy prices climbed 45.8 percent, the index for finished consumer goods other than foods and energy increased 12.3 percent, and capital equipment prices rose 11.7 percent. The Producer Price Index for intermediate goods moved up 14.2 percent over the year, and crude material prices were 16.3 percent higher than a year ago.

Finished goods

Finished consumer goods. The Producer Price Index for finished consumer goods rose 1.8 percent on a seasonally adjusted basis for the second consecutive month. As in July, the steep advance in August was primarily due to higher prices for consumer foods. Price increases accelerated for pork, beef and veal, and fresh and dried

vegetables. Processed poultry prices advanced 7.3 percent, after a 23.5 percent rise in July. Prices turned up after declining in July for refined sugar, roasted coffee, milled rice, and flour base mixes and doughs. Prices also rose for eggs, vegetable oil end products, and fish.

The index for finished consumer goods other than foods and energy rose 0.7 percent in August, considerably less than in either of the 2 previous months. Prices for apparel, sanitary papers and health products, textile housefurnishings, and nonalcoholic beverages rose much less than in July. Gold jewelry prices turned down, after increasing in the previous month. On the other hand, price increases accelerated for alcoholic beverages, soaps and synthetic detergents, and household flatware. Prices for passenger cars and household furniture rose almost as much as in July.

Prices for energy goods turned up slightly (0.2 percent), after declining 0.6 percent in both June and July. Home heating oil prices rose 0.8 percent, after 2 months of almost no change. Prices for finished lubricants also advanced. Gasoline prices fell for the third consecutive month.

Capital equipment. The index for capital equipment advanced 0.9 percent, less than in July and the same as in June. Motor truck prices rose 2.5 percent, compared with a 3.2 percent advance a month earlier. Price increases also slowed for integrating and measuring instruments, power driven hand tools, oilfield machinery, machine tools, and construction machinery. Railroad equipment prices were unchanged, after rising rapidly in July. On the other hand, prices rose faster than in July for fans and blowers, mining machinery, and scales and balances.

Intermediate materials

The Producer Price Index for Intermediate Materials, Supplies, and Components advanced 1.0 percent from July to August, seasonally adjusted, following increases of 0.8 percent in each of the 2 prior months. About half of the August advance was due to a 9.7 percent jump in the index for foods and feeds, the largest monthly climb since October 1974. Much of this increase was accounted for by sharply higher prices for feeds. Prices for animal fats and oils and refined sugar used in food manufacturing turned up substantially, after falling sharply in July. Prices also rose for corn syrup, vegetable oils, and flour.

The intermediate energy index moved up 0.4 percent, following a 2.6 percent advance in July and moderate rises in each of the 3 months before that. Price increases slowed considerably for residual fuel and electric power. Liquefied petroleum gas prices declined for the second consecutive month.

The index for intermediate materials other than foods and energy registered a 0.6 percent advance, more than in July but less than in June. The nondurable manufacturing materials index rose 0.9 percent, following 2 months of smaller increases. Prices for inedible fats and oils climbed nearly 25 percent; this index had fallen more than 30 percent from June 1979 to June 1980. Prices also rose for leather, gray fabrics, and phosphates. On the other hand, prices continued to decline for plastic resins and nitrogenates.

The durable manufacturing materials index edged up 0.2 percent, after turning down in the previous month. Substantial price increases for safety glass, foamed plastic products, and lead were partly offset by decreases for jewelers' materials, gold, and hardwood lumber. Steel prices were virtually unchanged, following a July decrease.

The index for construction materials rose 0.5 percent, the same as in July. Prices advanced for millwork, plywood, copper wire and cable, and prepared paint. Softwood lumber prices also rose but far less than in either June or July. Prices for most kinds of nonmetallic mineral products used for construction changed very little.

The manufacturing components index advanced 1.3 percent, more than in any of the 5 preceding months. This acceleration was largely due to a 2.5 percent increase in prices for motor vehicle parts, the largest rise since March 1977. Prices also rose for electronic components. Among other intermediate goods, higher prices were registered for unsupported plastic film and nonfarm tractor parts, while mixed fertilizer prices turned down.

Crude materials

The Producer Price Index for Crude Materials for Further Processing increased 5.7 percent in August on a seasonally adjusted basis, following a 6.3 percent rise in July. Foodstuff prices advanced as sharply as in the preceding month, energy materials rose almost as much as in July, but prices for materials other than foods and energy moved up much less.

The index for crude foodstuffs and feedstuffs climbed 9.0 percent in August, the same as in July. Prices for hogs, corn, oilseeds, and live poultry continued to rise rapidly, although not as steeply as in July. Cattle, hay, and wheat prices advanced more than in the preceding month. Raw cane sugar prices climbed nearly 27 percent, after falling sharply for 2 months. Green coffee prices moved down less than in July, and cocoa bean prices declined for the sixth consecutive month.

Prices for energy materials rose 1.3 percent, about as much as in most recent months. Crude petroleum prices advanced more than in any other month since January, but natural gas prices rose considerably less than in July.

The index for crude nonfood materials less energy rose 2.9 percent, after climbing 7.1 percent in July. Prices for cotton, nonferrous scrap, and potash moved up much less than in the preceding month, and leaf tobacco prices turned down. In contrast, prices for iron and steel scrap climbed 14.5 percent, after falling at an annual rate 46.8 percent in the first half of the year. Hides and skins advanced more than 12 percent for the third consecutive month. Wastepaper prices edged up slightly, after falling substantially for 3 months.

[1] Comprehensive relative importance figures are computed once each year in December. Data shown are expressed as a percent of total finished goods, total intermediate materials, or total crude materials. Data shown will not add up to 100.000 because not all commodity components of each stage-of-processing (SOP) index are shown; relative importance figures shown account for about 87 percent of total finished goods, about 89 percent of total intermediate materials, and about 98 percent of total crude materials. For each commodity component of the Finished Goods Index which is allocated to both capital equipment and finished consumer goods excluding foods, the relative importance figure shown reflects only the share allocated to the SOP grouping under which it is listed. For example, the relative importance figure shown for household furniture under the SOP grouping for finished consumer goods excluding foods includes the share allocated to that SOP grouping but not the share allocated to capital equipment.

[1] Indexes with a commodity point code of .99 are calculated by a revised methodology. See "Technical Note on Data from the Producer Price Index Revision" at the back of this publication.

[2] Data for April 1980 have been revised to reflect the availability of late reports and corrections by respondents. Data are not seasonally adjusted.

[3] Seasonal commodity—no price available this month.

[4] Some of the titles of the individual commodity price indexes included in this grouping are not shown.

[5] Not available.

[6] Prices for some items in this grouping are lagged 1 month.

[7] Regional price indexes for bituminous coal, industrial sizes, contract are presented in table 8 of this report.

[8] Prices for natural gas (05-31) are lagged 1 month.

[9] Includes only domestic production. Some prices are lagged 1 month.

[10] Prices for gasoline (05-71), light distillate (05-72), middle distillate (05-73), and residual fuels (05-74) are lagged 1 month.

[11] Regional refined petroleum product prices and price indexes are presented in table 7 of this report.

[12] Some prices for industrial chemicals (06-1) are lagged 1 month.

N.E.C. Not elsewhere classified.

[1] These indexes are calculated by combining the indexes listed below by commodity code after each special commodity grouping (titles in table 6). The weights are those used for the comprehensive All Commodities index.

[2] Data for April 1980 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication.

All commodities, less farm products: 02 through 15

All foods: 01-1,01-7, and 02 less 02-61, 02-62, and 02-9

Processed foods: 02 less 02-61, 02-62, and 02-9

Industrial commodities, less fuels and power: 03, 04, and 06 through 15

Selected textile mill products: 03-27, 03-37-01-05, 03-37-01-07, 03-37-01-09, 03-37-01-11, 03-37-03-42, 03-4, 03-81-01-55, 03-81-01-72, 03-81-01-73, 03-81-02-39, 03-81-02-72, 03-81-02-74, 03-81-03-62, 03-81-03-64, 03-82-01, 03-82-02, 03-03-22, 03-63-03-42, and 12-31

Hosiery: 03-81-01-72, 03-81-01-73, 03-81-02-74, 03-81-03-64

Underwear and nightwear: 03-81-01-74, 03-81-01-75, 03-81-01-76, 03-81-03-62

Chemicals and allied products, including synthetic rubber and synthetic fibers: 03-1, 06 less 06-4, and 07-11-02

Pharmaceutical preparations: 06-35 and 06-36

Lumber and wood products, excluding millwork and other wood products: 08-1 and 08-3

Special metals and metal products: 10, 11-1, and 14-1

Fabricated metal products: 10-3, 10-4, 10-5, 10-6, 10-7, and 10-8

Copper and copper products: 10-22-01-06, 10-22-01-06, 10-22-01-13, 10-23-01, 10-24-01-06, 10-25-02, and 10-26-01

Machinery and motive products: 11 and 14

Machinery and equipment, except electrical: 11-1, 11-2, 11-3, 11-4, 11-6, 11-9

Agricultural machinery, including tractors: 11-11, 11-12 less 11-11-51 and 11-12-51

Metalworking machinery: 11-32, 11-33-04, 11-37, and 11-38

Numerically controlled machine tools: 11-37-11-11, 11-37-11-12, 11-37-14-11, and 11-37-16

Total tractors: 11-11 and 11-28 less 11-11-51

Industrial valves: 11-49-01-01 through 11-49-01-06, 11-49-01-16 through 11-49-01-19, 11-49-01-21 through 11-49-01-27

Industrial fittings: 11-49-01-11 through 11-49-01-15

Abrasive grinding wheels: 11-36-11, 11-36-12, 11-36-13, 11-36-14, 11-36

Agricultural machinery and equipment, less parts (old commodity code 11-1): 11-1 less 11-11-51 and 11-12-51

Farm and garden tractors, less parts (old commodity code 11-11): 11-11 less 11-11-51

Agriculturalmachinery excluding tractors, less parts (old commodity code 11-12): 11-12 less 11-12-51

Construction materials: 06-21, 07-21, 08-11, 08-12-01-01, 08-12-01-02, 08-12-01-71, 08-2, 08-3, 09-2, 10-13-02-39, 10-13-02-48, 10-13-02-55, 10-13-02-63, 10-13-02-69, 10-13-02-71, 10-13-02-89, 10-13-02-91, 10-15-01-31, 10-15-01-32, 10-15-01-33, 10-25-01-01, 10-25-01-03, 10-25-01-04, 10-25-01-05, 10-25-01-17, 10-25-01-18, 10-25-01-19, 10-25-01-21, 10-25-01-23, 10-25-02-51, 10-25-02-52, 10-25-19-93, 10-26-01-06, 10-26-01-07, 10-26-01-09, 10-26-01-11, 10-26-02-67, 10-26-02-71, 10-41-01, 10-5, 10-6, 10-71, 10-73-01-01, 10-73-01-06, 10-73-01-11, 10-73-01-12, 10-73-01-13, 10-73-01-14, 10-73-01-15, 10-73-01-56, 10-73-01-57, 10-74-01-01, 10-74-01-31, 10-74-01-81, 10-74-01-82, 10-74-01-87, 10-74-01-91, 10-74-01-95, 10-81-01-46, 10-83-01-01, 10-83-01-03, 10-83-01-05, 10-83-01-07, 10-83-01-09, 10-81-01-11, 10-83-01-21, 10-83-01-23, 10-83-01-31, 10-83-01-33, 10-83,01-35, 10-83-01-37, 10-63-01-41, 10-83-01-46, 10-83-01-48, 10-89-01-26, 10-89-01-33, 10-89-01-51, 11-42, 11-47, 11-49-01-02, 11-49-01-06, 11-49-01-12, 11-49-01-15, 11-71-01-01, 11-71-01-02, 11-71-01-03, 11-71-01-04, 11-71-02-65, 11-71-02-71, 11-71-02-73, 12-11-01-06, 12-32, 13-11-01-01, 13-11-02-07, 13-2, 13-3, 13-4, 13-6, 13-7, 13-91, 13-92, 13-93

NOTE: The index is designed to measure changes in the prices of shipping goods by rail in the United States. The representative prices and sample used for the index reflect the railroads' prices for shipping a fixed set of commodities under specified and unchanging conditions. The index is not intended to measure changes in railroad revenue or shipper costs that result from changes in services or mode.

Technical Notes

Brief Explanation of Producer Price Indexes

Producer price indexes measure average changes in prices received in primary markets of the United States by producers of commodities in all stages of processing. These data were previously presented as the Wholesale Price Index. The name "Producer Price Indexes" is now being used to reflect more accurately the coverage of the data. The sample used for calculating these indexes continues to contain nearly 2,800 commodities and about 10,000 quotations selected to represent the movement of prices of all commodities produced in the manufacturing, agriculture, forestry, fishing, mining, gas and electricity, and public utilities sectors. The universe includes all commodities produced or imported for sale in commercial transactions in primary markets in the United States.

Producer price indexes can be organized by stage of processing or by commodity. The stage-of-processing structure organizes products by degree of fabrication (i.e., finished goods, intermediate or semifinished goods, and crude materials). The commodity structure organizes products by similarity of end-use or material composition.

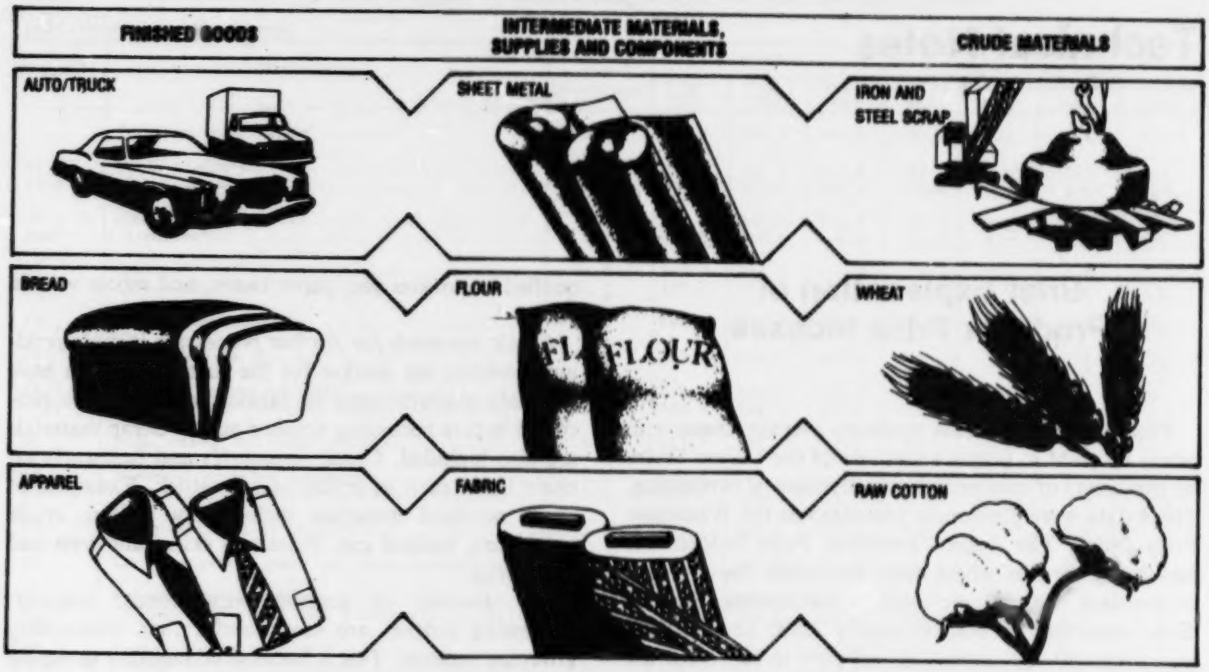
Finished goods are commodities that will not undergo further processing and are ready for sale to the ultimate user, either an individual consumer or a business firm. Capital equipment (formerly called producer finished goods) includes commodities such as motor trucks, farm equipment, and machine tools. Finished consumer goods include foods and other types of goods eventually purchased by retailers and used by consumers. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durables such as automobiles, household furniture, and jewelry, and nondurables such as apparel and gasoline.

Intermediate materials, supplies, and components are commodities that have been processed but require further processing before they become finished goods. Examples of such semifinished goods include flour, cotton yarns, steel mill products, belts and belting, lumber, liquefied petroleum gas, paper boxes, and motor vehicle parts.

Crude materials for further processing include products entering the market for the first time which have not been manufactured or fabricated but will be processed before becoming finished goods. Scrap materials are also included. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, natural gas, hides and skins, and iron and steel scrap.

For analysis of general price trends, stage-of-processing indexes are more useful than commodity grouping indexes. This is because commodity grouping indexes sometimes produce exaggerated or misleading signals of price changes by reflecting the same price movement through various stages of processing. For example, suppose that a price rise for steel scrap results in an increase in the price of steel sheet and then an advance in prices of automobiles produced from that steel. The All Commodities Price Index and the Industrial Commodities Price Index would reflect the same price movement three times—once for the steel scrap, once for the steel sheet, and once for the automobiles. This multiple counting occurs because the weighting structure for the All Commodities Index uses the total shipment values for all commodities at all stages of processing. On the other hand, the Finished Goods Price Index would reflect the change in automobile prices, the Intermediate Materials Price Index would reflect the steel sheet price change, and the Crude Materials Price Index would reflect the rise in the price of steel scrap. (See illustration.)

To the extent possible, prices used in calculating producer price indexes apply to the first significant commercial transaction in the United States, from the production or central marketing point. Price data are generally collected monthly, primarily by mail questionnaire. Respondents are asked to provide net prices or to provide all applicable discounts. BLS attempts to base producer price indexes on actual transaction prices; however, list or book prices are used if transaction prices are not available. Most prices are obtained directly from producing companies on a voluntary and confidential basis, but some prices are taken from trade publications or from other Government agencies. Prices



generally are reported for the Tuesday of the week containing the 13th day of the month.

In calculating producer price indexes, price changes for the various commodities are averaged together with weights representing their importance in the total net selling value of all commodities as of 1972. The detailed data are aggregated to obtain indexes for stage-of-processing groupings, commodity groupings, durability of product groupings, and a number of special composite groupings. Each index measures price changes from a reference period which equals 100.0 (usually 1967, as designated by the Office of Management and Budget). An increase of 125 percent from the reference period in the Finished Goods Price Index, for example, is shown as 225.0. This change can also be expressed in dollars, as follows: "The price of a representative sample of finished goods sold in primary markets in the United States has risen from $100 in 1967 to $225."

Calculating Index Changes

Movements of price indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period, while percent changes are not. The box shows the computation of index point and percent changes.

Index Point Change	
Finished Goods Price Index	185.5
less previous index	184.5
equals index point change	1.0
Index Percent Change	
Index point change	1.0
divided by the previous index	184.5
equals	0.005
result multiplied by 100	0.005 x 100
equals index percent change	0.5

Percent changes for 3-month and 6-month periods are expressed as annual rates that are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics published seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted data usually are preferred because they eliminate the effect of changes that normally occur at about the same time and in about the same magnitude

every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays, For this reason, seasonally adjusted data more clearly reveal the underlying cyclical trends. Seasonally adjusted data are subject to revision when seasonal factors are revised each year.

The unadjusted data are of primary interest to users who need information which can be related to the actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. Unadjusted data generally are used in escalating contracts such as purchase agreements or real estate leases.

Data from the Producer Price Index Revision

Each month this report presents data from the Producer Price Index (PPI) revision in table 4, "Producer price indexes for the net output of selected industries and their products." Indexes for the four industries in the pilot program to test the methodology and concepts of the PPI revision formerly appeared in table 14. Table 4 includes data for additional Standard Industrial Classification (SIC) industries (4-digit level) and Census products (7-digit level); indexes for Census product classes (5- and 6-digit levels) and more detailed subproducts (9-digit level); and, for some industries, indexes for other sources of revenue. Thus, table 4 shows all official indexes arising from the ongoing PPI revision. By 1985, table 4 will cover all 493 SIC mining and manufacturing industries.

Traditional commodity price indexes and Industry-Sector Price Indexes (ISPI's) will continue to be published. In 1983, however, an entirely new structure will replace the traditional commodity structure as the primary vehicle for releasing and analyzing price changes at the primary market level.

Kinds of product indexes

Industries listed in table 4 may be represented by one to three kinds of product indexes. Every industry has *primary product indexes* to show changes in prices received by establishments classified in the industry for products made primarily, but not exclusively, within that industry. To be classified in an industry, an establishment must have a plurality of its total shipment value accounted for by primary products. In addition, some industries also may have *secondary product indexes* to show changes in prices received by establishments classified in the industry for products primary to some other industry. Finally, some industries have *miscellanous receipts indexes* to show price changes in other sources of revenue received by establishments within the industry which are not derived from the sale of their products. Because of the distinction between primary and secondary products, an index for a product made in one industry may differ from the index for the same product made in another industry.

Corresponding indexes

Some 7-digit Census products published in table 4 correspond to 8-digit commodities published in table 6. Similarly, some 4-digit SIC industries and 5-digit Census product classes in table 4 correspond to the ISPI's in tables 11, 12, and 13. In these cases, movements in the commodity or Industry-Sector Price Indexes are calculated on the basis of the movements of their counterparts in table 4. Although most such indexes continue to be published in tables, 6, 11, or 13 on their original base period of 1967 = 100 or some later base, the corresponding indexes in table 4 are published on a base of the month of their introduction. Therefore, index levels for corresponding items may differ, but monthly percent changes will be identical.

A point code of ".99" immediately after an 8-digit commodity code in table 6 identifies a commodity index that is calculated from a product index in table 4. A footnote after the industry or product class title in tables 11, 12, or 13 indicates an ISPI based on an index from table 4. The aggregation of commodity price indexes into commodity grouping indexes in table 6 continues to follow the traditional methodology; similarly, stage-of-processing price indexes in table 1 also are calculated from the commodity grouping indexes as in the past.

How new indexes differ from traditional commodity indexes

New indexes differ from traditional commodity indexes in a number of respects:

(1) New indexes are *industry-based.* The entire output of each industry is sampled, including primary and secondary production and miscellaneous receipts. Traditional commodity indexes are based on a selection of the most important commodities, and most Industry-Sector Price Indexes continue to be calculated from these traditional commodity indexes. In addition, traditional ISPI's do not cover miscellaneous receipts, and prices of products are included without systematic regard for the industry classification of the producer. New indexes, on the other hand, are based on prices of primary and secondary products made by producers classified in the specified industry; as a result, new indexes apply to production within the specified industry. As data from more mining and manufacturing industries become available, additional indexes will be

constructed to cover each product regardless of the industry of origin.

(2) New indexes are easier to use with other industry-oriented economic data because they are *classified according to the SIC* and incorporate most features of the Census of Manufactures product code extensions of the SIC.

(3) New indexes use *net output values of shipments as weights.* Net output values refer to the value of shipments leaving the industry and exclude intra-industry shipments. In contrast, weights in traditional commodity price indexes and ISPI's include shipments within an industry. The resulting multiple-counting of price changes at successive stages of processing is one major defect of the traditional commodity grouping indexes. Stage-of-processing indexes partially correct this defect, but new indexes consistently correct it at all levels of aggregation. (Net output weights are not used, however, for traditional commodity indexes whose movements are based on corresponding new indexes.)

In the revision program, the relative importance of items within a product is based upon shipment value data and sampling weights from the revision survey itself. When detailed products are aggregated to the 5-digit product class and 4-digit industry levels, however, weights are taken from Census of Manufactures data, along with estimates of intra-industry shipments from input-output tables produced by the Bureau of Economic Analysis of the U.S. Department of Commerce.

(4) New indexes emphasize *actual transaction prices at the time of shipment* to minimize the use of list prices and order prices, which occasionally have been used in traditional commodity price indexes and ISPI's. In addition, some traditional indexes have been calculated intentionally from order prices rather than from shipment prices.

(5) New indexes are based on prices reported by companies of all sizes and locations selected by *probability sampling*. In addition, individual items and transaction terms from these firms are chosen by probability techniques. (Estimates of sampling error will be published later.) In the traditional PPI program, major companies selected on a judgment basis have been asked to report prices for volume-selling items under "typical" transaction terms.

Early: "Improving the Measurement of Producer Price Change," April 1978; and "The Producer Price Index Revision: Overview and Pilot Survey Results," December 1979. Price Movements September 1980

The Producer Price Index for Finished Goods edged down 0.2 percent from August to September on a seasonally adjusted basis. The September decline followed advances of 1.7 and 1.5 percent in July and August, respectively. Prices for intermediate (semifinished) goods moved up 0.6 percent, somewhat less than in either of the 2 preceding months. Crude material prices increased 1.3 percent, considerably less than in either July or August (table A).

Nearly two-thirds of the sharp slowdown in the Finished Goods Price Index was caused by a 0.2 percent decrease in food prices, which had risen about 4 percent in each of the 2 previous months. Most of the rest of the deceleration was due to sharply lower prices for motor vehicles, as car and truck manufacturers closed out the 1980 model year with across-the-board discounts. Small declines were also recorded for energy goods. On average, prices for other finished goods rose 0.7 percent, about as much as in August.

Before seasonal adjustment, the Finished Goods Price Index was virtually unchanged at 248.9 (1967 = 100). Over the year, this index rose 12.8 percent. The index for finished consumer foods increased 7.8 percent from September 1979 to September 1980, energy prices were up 36.4 percent, the index for finished consumer goods other than foods and energy increased 11.4 percent, and capital equipment prices moved up 10.8 percent. The Producer Price Index for intermediate goods advanced 13.2 percent over the year, and crude material prices were 15.1 percent higher than a year ago.

Finished goods

Finished consumer goods. The Producer Price Index for finished consumer goods declined 0.2 percent in September on a seasonally adjusted basis, after rising 1.8 percent in both July and August. Most of the turnaround was due to lower food prices. Prices turned down for beef and veal, pork, and fish, following increases in each of the previous 3 months. Prices also turned down for roasted coffee and refined sugar. Prices for fresh and dried vegetables, processed poultry, and eggs all rose in September, although not as sharply as in the previous month. On the other hand, milled rice prices rose 9.1 percent, almost twice as much as in August.

The price index for consumer goods other than foods and energy was unchanged in September. Passenger car prices declined 4.2 percent, following increases of about 2 percent in both July and August. The September decrease reflected across-the-board discounts granted by domestic producers to close out the 1980 model year. (These liquidation allowances are included in the PPI because they represent more accurate transaction prices. Data limitations prevented BLS from reflecting these allowances in previous years.) Flatware prices also turned down, and price increases slowed markedly for alcoholic beverages and soaps and synthetic detergents. In contrast, prices for jewelry, tires and tubes, lawnmowers, and over-the-counter drugs turned up after declining in August. Price increases accelerated for textile housefurnishings and consumer plastics.

Prices for finished energy goods fell 0.4 percent, the fifth consecutive moderate monthly change following the surge in energy prices which began in late 1978. Gasoline prices fell 0.7 percent, the fourth consecutive monthly decline. Home heating oil prices moved down 0.2 percent, after 2 months of small increases. Prices for finished lubricants rose much less than in August.

Capital equipment. The index for capital equipment edged down 0.1 percent, after rising considerably in each of the previous 2 months. Prices for motor vehicles fell sharply, after rising substantially in both July and August. Photographic equipment prices also turned down after advancing in August. On the other hand, prices rose after little or no change in August for aircraft, plastic and rubber industry machinery, agricultural machinery, chemical industry machinery, railroad equipment, hand tools, and metal cutting machine tools.

Intermediate materials

The Producer Price Index for Intermediate Materials, Supplies, and Components moved up 0.6 percent in September, seasonally adjusted, following a 1.0 percent increase in August. The slowdown was due to the index for foods and feeds, which rose only one-tenth as much as in the previous month. Prices for most other goods

continued to either rise moderately or decline, although sharp advances were registered for nonferrous metals and some machine parts.

The index for intermediate foods and feeds rose 0.9 percent, after climbing 9.7 percent in August. Price increases decelerated for formula feeds, crude vegetable oils, and flour. In addition, prices fell for refined sugar used in food manufacturing, animal fats and oils, grain by-product feeds, refined vegetable oils, and milk chocolate coating. Corn syrup prices held steady, following several months of large increases. In contrast, prices for vegetable cake and meal feeds advanced rapidly for the third consecutive month.

The index for intermediate materials less foods and energy increased 0.5 percent, slightly less than in August. Within that category the nondurable manufacturing materials index edged down 0.1 percent, following a 0.9 percent advance in the previous month. Prices fell for industrial chemicals, lemon oil, plastic resins and materials, inedible fats and oils, and leather. On the other hand, higher prices were recorded for gray fabrics, synthetic fibers, and pharmaceutical materials.

The construction materials index rose 0.4 percent, following increases of 0.5 percent in July and August. Prices increased for millwork, concrete products, fabricated structural metal products, and lighting fixtures, while lower prices were registered for softwood lumber, plywood, asphalt roofing, and refractories.

The durable manufacturing materials index advanced 1.2 percent, much more than in August. The September upward movement was led by sharp increases for silver, gold, platinum, and jewelers' materials. Prices also rose for lead, tin, and zinc. Among other intermediate nonfood nonenergy goods, large advances occurred in prices for refrigerant compressors, internal combustion engines, bearings, and several kinds of machinery parts. On the other hand, prices for motor vehicle parts moved up much less than in August.

The intermediate energy index moved up 0.6 percent, slightly more than in August. Electric power prices rose substantially, but prices edged down for residual fuel, diesel fuel, and liquefied petroleum gas.

Crude materials

The rate of increase for the Producer Price Index for Crude Materials for Further Processing decelerated to 1.3 percent in September on a seasonally adjusted basis, following a 5.7 percent rise in August. Foodstuff prices fell, following steep advances in both of the 2 preceding months; on the other hand, energy materials rose more than in any month since February, and prices for materials other than foods and energy continued to move up sharply.

The index for crude foodstuffs and feedstuffs fell 0.4 percent, following advances of 9.0 percent in both July and August. Livestock prices declined, following 3 months of steep advances. Raw cane sugar prices decreased sharply, after rising almost 27 percent in the previous month, and prices for cocoa beans fell for the seventh consecutive month. In contrast, prices for soybeans, grains, and live poultry climbed for the third consecutive month, and green coffee prices turned up after declining for 3 consecutive months.

Prices for energy materials rose 2.5 percent, following 4 months of increases between 1.0 and 1.5 percent. Most of this acceleration was caused by sharply higher prices for natural gas. Coal prices also moved up more than in most recent months, but crude petroleum prices increased much less than in August.

The index for crude nonfood materials less energy rose 4.9 percent, after climbing 7.1 percent in July and 2.9 percent in August. Prices for iron and steel scrap climbed 14.5 percent for the second consecutive month. Prices for cotton, aluminum base scrap, crushed stone, and crude natural rubber also moved up sharply. On the other hand, prices for hides and skins, wastepaper, and potash fell.

Note

Beginning this month, BLS will publish indexes for major product lines of the telecommunications industry in table 15 of this report. For a detailed explanation of this program, see page 69.

[1] Comprehensive relative importance figures are computed once each year in December.

[2] Data for May 1980 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication.

[3] Not seasonally adjusted.

[4] Includes crude petroleum.

[5] Excludes crude petroleum.

[6] Percent of total finished goods.

[7] Percent of total intermediate materials.

[8] Formerly titled "Crude materials for further processing, excluding crude foodstuffs and feedstuffs, plant and animal fibers, oilseeds, and leaf tobacco."

[9] Percent of total crude materials.

[1] Comprehensive relative importance figures are computed once each year in December. Data shown are expressed as a percent of total finished goods, total intermediate materials, or total crude materials. Data shown will not add up to 100.000 because not all commodity components of each stage-of-processing (SOP) index are shown; relative importance figures shown account for about 87 percent of total finished goods, about 89 percent of total intermediate materials, and about 96 percent of total crude materials. For each commodity component of the Finished Goods Index which is allocated to both capital equipment and finished consumer goods excluding foods, the relative importance figure shown reflects only the share allocated to the SOP grouping under which it is listed. For example, the relative importance figure shown for household furniture under the SOP grouping for finished consumer goods excluding foods includes the share allocated to that SOP grouping but not the share allocated to capital equipment.

[1] Data for May 1980 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication. All prices are lagged 1 month. Data are not seasonally adjusted.

[2] Caution should be used in interpreting month-to-month changes because of low response rates, which ranged from 30 to 60 percent for these indexes.

NOTE: These indexes are designed to measure changes in the price of coal s
contract sales transactions (excluding captive production) in various domestic r
regions. Prices are reported by coal operators or sales agents, f.o.b. mine, per ne
ton.

29114	Distillate fuel oil		569.5	675.4	858.1	869.3	866.5
29115	Residual fuel oil		684.5	786.5	869.9	949.0	951.3
29116	Liquefied refinery gases (feed stock and other uses) . . .	12/75	154.0	180.6	246.8	242.9	241.0
29117	Lubricating oils and greases, made in refineries	12/75	132.9	140.3	170.7	177.5	178.1
29118	Unfinished oils and lubricating oil base stock		477.9	551.2	748.5	801.6	792.4
29119	Asphalt		470.7	538.4	660.7	629.3	629.3
29510	Paving mixtures and blocks		284.3	308.2	367.1	372.0	374.0
29522	Roofing asphalts and pitches, coatings, and cements	12/75	138.8	148.8	196.5	188.6	188.5
29523	Asphalt and tar roofing and siding products	12/75	143.1	144.1	169.6	175.2	173.3
30	RUBBER AND MISCELLANEOUS PLASTICS PRODUCTS						
30111	Passenger car and motorcycle pneumatic tires (casings). . .	12/73	173.3	180.9	197.9	208.8	203.3
30112	Truck and bus (and off-the-highway) pneumatic tires	12/73	180.1	188.2	201.3	205.4	207.8
30113	Other pneumatic tires and solid tires	12/73	181.4	190.3	199.6	202.9	(3)
30114	All inner tubes	12/73	208.6	210.8	227.6	232.3	(3)
30115	Tread rubber, tire sundries and repair materials	12/73	165.5	173.0	204.1	204.1	204.1
30211	Rubber and plastics protective footwear	12/75	135.9	135.9	135.9	135.9	135.9
30212	Rubber and plastics shoes, slippers, other footwear, n.e.c.	12/75	125.1	127.2	127.2	134.5	134.5
30310	Reclaimed rubber	12/73	171.1	178.9	187.8	184.9	184.9
30411	Rubber and plastics belts and belting, flat	12/75	130.6	134.9	147.1	158.3	158.3
30412	Rubber and plastics belts and belting, other than flat . .	12/75	127.7	133.0	145.9	147.7	149.2
30413	Rubber and plastics hose, horizontal reinforced	12/75	132.2	135.2	136.4	135.5	135.5
30414	Rubber and plastics hose, continuous molded nonhydraulic .	12/75	136.6	138.7	151.5	158.5	(3)
30696	Rubber heels and soles	12/71	213.9	218.1	239.4	249.3	249.3
30697	Druggist and medical sundries	12/75	129.6	132.2	136.1	143.0	143.0
30790	Consumer and commerical plastics products, n.e.c.	12/75	124.2	128.5	135.1	135.7	139.4
30791	Unsupported plastics film, sheets, rods, and tubes	12/70	168.7	172.7	182.0	189.8	189.8
30792	Foamed plastic products	06/78	109.7	110.3	120.5	123.9	124.0
30793	Laminated sheets, rods, and tubes	12/70	158.9	162.6	173.5	174.0	175.1
30794	Packaging and shipping containers	06/78	111.7	116.1	123.9	123.1	123.4
30795	Industrial plastics products, except belting.	06/78	112.3	114.3	123.0	125.6	125.9
30796	Construction plastics products	12/75	121.9	127.3	126.7	131.7	130.4
30798	Regenerated cellulosic products, except rayon	12/70	214.3	217.6	227.6	244.0	(3)
31	LEATHER AND LEATHER PRODUCTS						
31111	Finished cattle hide and kip side leathers		362.8	335.7	299.5	321.6	304.8
31113	Finished sheep and lamb leathers	12/69	298.0	277.9	259.3	246.1	250.3
31420	House slippers	12/75	135.8	135.0	145.4	152.5	152.5
31431	Men's dress shoes	12/75	151.3	160.4	153.7	153.8	156.8
31433	Men's work shoes	12/71	231.7	240.7	246.6	246.6	249.0
31441	Women's shoes, flats	12/75	131.8	134.3	146.4	148.4	148.4
31442	Women's shoes, low heel	12/75	138.4	143.9	152.2	152.2	153.0
31443	Women's shoes, medium heel	12/75	138.6	144.2	151.9	152.8	152.7
31444	Women's shoes, high heel	12/75	136.4	141.7	148.8	148.9	150.0
31492	Misses' and children's shoes	12/71	150.1	153.2	159.4	162.6	163.2
32	STONE, CLAY, GLASS, AND CONCRETE PRODUCTS						
32111	Sheet (window) glass	12/71	(3)	213.3	215.5	215.5	215.5
32112	Plate and float glass	12/75	121.2	121.4	127.4	122.6	122.6
32113	Laminated glass, made from glass produced in same estab . .	12/71	129.1	129.3	142.4	146.0	146.5
32114	Other flat glass, made from glass produced in same estab. .	12/75	130.3	130.1	136.6	144.8	144.8
32210	Glass containers		261.1	265.2	294.2	294.5	294.5
32313	Laminated glass, made of purchased glass	12/75	124.1	124.3	136.9	140.3	140.7
32410	Cement, hydraulic(including cost of shipping containers) .		283.3	285.5	313.9	310.3	309.4
32511	Brick, except ceramic glazed and refractory		263.1	271.0	281.7	280.7	281.6
